**NEW QUESTION: 1**View the exhibit.All switches in this figure are HP Provision ASIC switches. They are enabled to establish adjacency with neighbors on all of their VLAN interfaces. Besides these configurations, they are operating at the default OSPF settings. How can a network administrator ensure that routing switch B uses the 10G link to reach 10.1.10.0/24 if its direct link to routing switch A fails?**A.** Set the VLAN 100 bandwidth to 10000.**B.** Set the VLAN 103 OSPF cost to 10.**C.** Set its reference bandwidth to 10000.**D.** Set the VLAN 103 bandwidth to 1000.**E.** Set the VLAN 100 OSPF cost to 10.**Answer: C**Explanation:(You have to modify the reference Value to

change OSPF calculations, and choose the 10G link)By default, an interface's OSPF cost is based on the port speed of the interface. The cost is calculated by dividing the reference bandwidth by the port speed. The default reference bandwidth is 100 Mbps, which results in the following default costs:> 10 Mbps port - 10> All other port speeds - 1The software uses the following formula to calculate the cost:Cost = reference-bandwidth/interface-speed

別の管理者が、VNET1とVNET2という名前の2つの仮想ネットワーク間の接続を確立しようとします。管理者は、仮想ネットワークを介した接続が失敗したことを報告します。

VNET1とVNET2の間でネットワーク接続をできるだけ迅速に確立できるようにする必要があります。Azureポータルから何をすべきですか？ **Answer:** Explanation: See solution below. Explanation

You can connect one VNet to another VNet using either a Virtual network peering, or an Azure VPN Gateway. To create a virtual network gateway Step 1 : In the portal, on the left side, click +Create a resource and type 'virtual network gateway' in search. Locate Virtual network gateway in the search return and click the entry. On the Virtual network gateway page, click Create at the bottom of the page to open the Create virtual network gateway page. Step 2: On the Create virtual network gateway page, fill in the values for your virtual network gateway. Name: Name your gateway. This is not the same as naming a gateway subnet. It's the name of the gateway object you are creating. Gateway type: Select VPN. VPN gateways use the virtual network gateway type VPN. Virtual network: Choose the virtual network to which you want to add this gateway. Click Virtual network to open the 'Choose a virtual network' page. Select the VNet. If you don't see your VNet, make sure the Location field is pointing to the region in which your virtual network is located. Gateway subnet address range: You will only see this setting if you did not previously create a gateway subnet for your virtual network. If you previously created a valid gateway subnet, this setting will not appear. Step 4: Select Create New to create a Gateway subnet. Step 5: Click Create to begin creating the VPN gateway. The settings are validated and you'll see the "Deploying Virtual network gateway" tile on the dashboard.

Creating a gateway can take up to 45 minutes. You may need to refresh your portal page to see the completed status. References:
