D. Applications can run directly on VMM
Answer: B,C

NEW QUESTION: 3 As an important part of cloud security services, network security is intended to isolate networks and protect networks against attacks.
A. False
B. True
Answer: B

NEW QUESTION: 4
Answer: Explanation: Explanation Step 1: To debug a cloud service from a remote machine, you must enable that functionality explicitly when you deploy your cloud service so that required services (msvsmon.exe, for example) are installed on the virtual machines that run your role instances. You can choose the Release configuration. Step 2: If you didn't enable remote debugging when you published the service, you have to republish the service with remote debugging enabled. Step 3: If you debug a role, the Visual Studio debugger attaches to each instance of that role. References:
