NEW QUESTION: 1After publishing a business object, which file should be reviewed for possible errors and/or warnings during the publishing process?**A.** systemTests.log**B.** server.log**C.** error.log**D.** security.log**Answer: B**

NEW QUESTION: 2What are two ports with the alternate role?**A.** 2 and 4**B.** 25 and 26**C.** 1 and 2**D.** 4 and 25**Answer: A**

NEW QUESTION: 3**A.** Option D**B.** Option B**C.** Option A**D.** Option C**Answer: A,C****Explanation:**A: An automated installation of a client over the network consists of the following high-level steps: Step 1. The client system boots over the network and gets its network configuration and the location of the install server from the DHCP server.Step 2: The install server provides a boot image to the client.Etc.D: If two client machines need to be installed with the same version of the Oracle Solaris11 OS but need to be installed differently in other ways, then create two AI manifests for the AI install service. The different AI manifests can specify different packages to install or a different slice as the install target, for example.

NEW QUESTION: 4You are leading a research project that will require between 10 and 20 aerospace engineers. Some senior-level aerospace engineers are available. They are more productive than junior-level engineers, who cost less and who are available as well. You want to determine the optimal combination of senior- and junior-level personnel. In this situation, the appropriate technique to use is to_____**A.** Prepare a control chart**B.** Use the Ishikawa diagram to pinpoint the problem**C.** Conduct a design of experiments**D.** Analyze the process using a Pareto diagram**Answer: C****Explanation:**Explanation/Reference:Explanation:This technique is used to identify which variables have the most influence. It is a statistical method to identify the factors that may influence specific variables of a product or process under development or in production. For example, roller blade designers might want to determine

which combination of number of wheels and titanium ball bearings would produce the most desirable "ride" characteristics at a reasonable cost. This technique, however, can be applied to project management issues such as cost and schedule trade-offs. An appropriately designed "experiment" often will help project managers to find an optimal solution from a relatively limited number of options, and often it help to determine the number and type of tests to use and their impact on quality.
