NEW QUESTION: 1You are deploying a new multi-tiered application consisting of a Web server, an application server, and a database server. When the virtual machines for the application are started, the database server must be started first followed by the application server and the Web server. What would you implement to meet the application requirements? **A.** VMware DRS affinity rules **B.** vSphere vApp **C.** vSphere CPU affinity rules **D.** VMware App Startup **Answer: B**

NEW QUESTION: 2 Measuring the results of most Business Requirements are generally: **A.** None of the above **B.** Binary (on or off, present or not) **C.** Either Analogue or Binary **D.** Analogue (a range of acceptable values) **Answer: B**

NEW QUESTION: 3 Network administrators are often hesitant to patch the operating systems on CISCO router and switch operating systems, due to the possibility of causing network instability, mainly because of which of the following? **A.** Having to rebuild the routing tables **B.** Having to re-IP the device **C.** Having to replace the kernel **D.** Having to rebuild ARP tables **E.** Having to rebuild all ACLs **Answer: C** Explanation: Many administrators are hesitant to upgrade the IOS on routers based on past experience with the code introducing instability into the network. It is often difficult to completely test an IOS software upgrade in a production environment because the monolithic kernel requires that the IOS be replaced before the device can be tested. Because of these reasons, IOS upgrades to resolve security flaws are often left undone in many organizations.
