Soft version & APP version have similar functions [C\\_FSM\\_2211 Test Simulator Fee](#) such as simulating the real exam scene, Many candidates can't successfully pass their real SPLK-1004 exams for the reason that they are too nervous to performance rightly as they do the practices.

**NEW QUESTION: 1** Which benefits does the Capture-Transform-Share solution provide?  
**A.** WAN optimization services  
**B.** video conferencing services  
**C.** voice conferencing services  
**D.** security and firewall services  
**E.** video on demand and video streaming services  
**F.** DNS, DHCP, and AD services  
**Answer: E**  
**Explanation:** Topic 2, Endpoint Configuration

### **NEW QUESTION: 2**

製造会社が機械設備に予測メンテナンスを実装したい会社は、データをリアルタイムでAWSに送信する何千ものIoTセンサーを設置しますソリューションアーキテクトは、各機械資産に対して順序付けられた方法でイベントを受信するソリューションの実装を任されています後で処理するためにデータが保存されていることを確認します。最も効率的なソリューションはどれですか。  
**A.** リアルタイムイベントにAmazon SQS標準キューを使用し、機器アセットごとに1つのキューを使用して、SQSキューからAWS Lambda関数をトリガーしてデータをAmazon S3に保存します  
**B.** リアルタイムイベントにAmazon SQS FIFOキューを使用し、機器アセットごとに1つのキューを使用して、SQSキューのAWS Lambda関数をトリガーしてデータをAmazon EFSに保存します  
**C.** 機器アセットごとにシャードを含むリアルタイムイベントにAmazon Kinesis Data Streamsを使用しますAmazon Kinesis Data Firehoseを使用してデータをAmazon EBSに保存します  
**D.** 各機器アセットのパーティションでリアルタイムイベントにAmazon Kinesis Data Streamsを使用しますAmazon Kinesis Data Firehoseを使用してデータをAmazon S3に保存します  
**Answer: B**  
**Explanation:** Explanation Amazon SQS Introduces FIFO Queues with Exactly-Once Processing and Lower Prices for Standard Queues You can now use Amazon Simple Queue Service (SQS) for applications that require messages to be processed in a strict sequence and exactly once using First-in, First-out (FIFO) queues. FIFO queues are designed to ensure that the order in which messages are sent and received is strictly preserved and that each message is processed exactly once. Amazon SQS is a reliable and highly-scalable managed message queue service for storing messages in transit between application components. FIFO queues complement the existing Amazon SQS standard queues, which offer high throughput, best-effort ordering, and at-least-once delivery. FIFO queues have essentially the same features

as standard queues, but provide the added benefits of supporting ordering and exactly-once processing. FIFO queues provide additional features that help prevent unintentional duplicates from being sent by message producers or from being received by message consumers. Additionally, message groups allow multiple separate ordered message streams within the same queue.

**NEW QUESTION: 3** 計画されたインフラストラクチャをサポートするには、Azure ADのカスタムドメイン名を定義する必要があります。

どのドメイン名を使用する必要がありますか？**A.** humongousinsurance.com**B.** humongousinsurance.local**C.** ad.humongousinsurance.com**D.**

humongousinsurance.onmicrosoft.com**Answer: A****Explanation:** Every Azure AD directory comes with an initial domain name in the form of domainname.onmicrosoft.com. The initial domain name cannot be changed or deleted, but you can add your corporate domain name to Azure AD as well. For example, your organization probably has other domain names used to do business and users who sign in using your corporate domain name. Adding custom domain names to Azure AD allows you to assign user names in the directory that are familiar to your users, such as '[email#160;protected]'. instead of 'alice@domain name.onmicrosoft.com'.**Scenario:** Network Infrastructure: Each office has a local data center that contains all the servers for that office. Each office has a dedicated connection to the Internet. Humongous Insurance has a single-domain Active Directory forest named humongousinsurance.com **Planned Azure AD Infrastructure:** The on-premises Active Directory domain will be synchronized to Azure AD. **References:**

<https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/add-custom-domain>  
Topic 7, Contoso Ltd (2) **Case study** This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided. To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study. At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section. To start the case study To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question. **Overview** Contoso, Ltd. is a manufacturing company that has offices worldwide. Contoso works with partner organizations to bring products to market. Contoso products are manufactured by using blueprint files that the company authors and maintains. **Existing Environment** Currently, Contoso uses multiple types of servers for business operations, including the following: \* File servers \* Domain controllers \* Microsoft SQL Server servers Your network contains an Active Directory forest named contoso.com. All servers and client computers are joined to Active Directory. You have a public-facing application named App1. App1 is comprised of the following three tiers: \* A SQL database \* A web front end \* A processing middle tier Each tier is comprised of five virtual machines. Users access the web front end by using HTTPS only. **Requirements** Currently, Contoso uses multiple types of servers for business operations, including the following: \* File servers \* Domain controllers \* Microsoft SQL Server servers Your network contains an Active Directory forest named contoso.com. All servers and

client computers are joined to Active Directory. You have a public-facing application named App1. App1 is comprised of the following three tiers: \* A SQL database \* A web front end \* A processing middle tier Each tier is comprised of five virtual machines. Users access the web front end by using HTTPS only. Planned Changes Contoso plans to implement the following changes to the infrastructure: \* Move all the tiers of App1 to Azure. \* Move the existing product blueprint files to Azure Blob storage. \* Create a hybrid directory to support an upcoming Microsoft Office 365 migration project. Technical Requirements Contoso must meet the following technical requirements: \* Move all the virtual machines for App1 to Azure. \* Minimize the number of open ports between the App1 tiers. \* Ensure that all the virtual machines for App1 are protected by backups. \* Copy the blueprint files to Azure over the Internet. \* Ensure that the blueprint files are stored in the archive storage tier. \* Ensure that partner access to the blueprint files is secured and temporary. \* Prevent user passwords or hashes of passwords from being stored in Azure. \* Use unmanaged standard storage for the hard disks of the virtual machines. \* Ensure that when users join devices to Azure Active Directory (Azure AD), the users use a mobile phone to verify their identity. \* Minimize administrative effort whenever possible. User Requirements Contoso identifies the following requirements for users: \* Ensure that only users who are part of a group named Pilot can join devices to Azure AD. \* Designate a new user named Admin1 as the service admin for the Azure subscription. \* Admin1 must receive email alerts regarding service outages. \* Ensure that a new user named User3 can create network objects for the Azure subscription.

**NEW QUESTION: 4** What is the purpose of the depot warranty available on administrative models of the SurePOS 340? **A.** to extend the standard warranty for an additional year **B.** to allow technicians to monitor the health of the unit remotely **C.** to provide same day on-site repair, seven days a week **D.** to offer a less expensive warranty option for self maintainers

**Answer: B**
