How to use it?

NEW QUESTION: 1A company is using Microsoft PPM to track task progress, The company implements standard overtime and non-billable time tracking.You observe that you cannot enter overtime hours in your current timesheet. You need to ensure that you can enter overtime hours. What should you do?**A.** In your timesheet add the overtime hours to your regular hours. **B.** In your timesheet add Overtime, and then enter the overtime hours,**C.** In your timesheet add Non-Billable, and then enter the overtime hours.**D.** Ask your project administrator to increase Maximum Hours per Day.**E.** In your timesheet switch to the My Work view, and then enter the overtime hours.**Answer: B**

NEW QUESTION: 2An organization is selecting a SaaS provider to replace its legacy, in house Customer Resource Management (CRM) application. Which of the following ensures the organization mitigates the risk of managing separate user credentials?**A.** Ensure the SaaS provider supports role-based access control.**B.** Ensure the SaaS provider supports secure hash file exchange.**C.** Ensure the SaaS provider supports encrypted password transmission and storage.**D.** Ensure the SaaS provider supports dual factor authentication.**E.** Ensure the SaaS provider supports directory services federation.**Answer: E****Explanation:**A SaaS application that has a federation server within the customer's network that interfaces with the customer's own enterprise user-directory service can provide single sign-on authentication. This federation server has a trust relationship with a corresponding federation server located within the SaaS provider's network.Single sign-on will mitigate the risk of managing separate user credentials. **Incorrect Answers:**A: Dual factor authentication will provide identification of users via a combination of two different components. It will not, however, mitigate the risk of managing separate user credentials.B: The transmission and storage of encrypted passwords will not mitigate the risk of managing separate user credentials.C: A hash file is a file that has been converted into a numerical string by a mathematical algorithm, and has to be unencrypted with a hash key to be understood. It will not, however, mitigate the risk of managing separate user credentials.D: Role-based access control (RBAC) refers to the restriction of system access to authorized users. It will not, however, mitigate the risk of managing separate user credentials.**References:**<https://msdn.microsoft.com/en-us/library/aa905332.aspx>
