**NEW QUESTION: 2** You are installing a new device to replace a device that failed. The configuration of the failed device is stored on a networked server, and the new device has an RXBOOT image installed. Under which condition does the streamlined Setup mode fail? **A.** The startup configuration file was deleted. **B.** Bit 6 is set in the configuration register. **C.** The last four bits of the configuration register are not equal to the decimal value 0 or 1. **D.** The startup configuration is corrupt. **Answer: C** Explanation: Explanation/Reference: Explanation: The lowest four bits of the configuration register (bits 3, 2, 1, and 0) form the boot field. The boot field determines if the router boots manually, from ROM, or from Flash or the network. To change the boot field value and leave all other bits set to their default values, follow these guidelines: If you set the configuration register boot field value to 0x0, you must boot the operating system manually with the boot command. software. If you set the configuration register boot field to any value from 0x2 to 0xF, the router uses the boot field value to form a default boot filename for booting from a network server. For more information about the configuration register bit settings and default filenames, refer to the appropriate router hardware installation guide.
