NEW QUESTION: 1
ある会社には、さまざまなクラスタータイプを使用してデータを処理および分析するMicrosoft AzureHDInsightソリューションがあります。操作は継続的です。
レポートは、特定のライムウィンドウ中の速度低下を示しています。
最短時間で問題を追跡するための監視ソリューションを決定する必要があります。
何を使うべきですか？**A.** Azure Monitor Metrics**B.** Azure Log Analytics log search query**C.** Ambari REST API**D.** HDInsight .NET SDK**E.** Azure Log Analytics alert rule query**Answer: C**Explanation:
Topic 1, Contoso LtdOverviewCurrent environmentContoso relies on an extensive partner network for marketing, sales, and distribution. Contoso uses external companies that manufacture everything from the actual pharmaceutical to the packaging.The majority of the company's data reside in Microsoft SQL Server database. Application databases fall into one of the following tiers:The company has a reporting infrastructure that ingests data from local databases and partner services.Partners services consists of distributors, wholesales, and retailers across the world. The company performs daily, weekly, and monthly reporting. RequirementsTier 3 and Tier 6 through Tier 8 application must use database density on the same server and Elastic pools in a cost-effective manner.Applications must still have access to data from both internal and external applications keeping the data encrypted and secure at rest and in transit.A disaster recovery strategy must be implemented for Tier 3 and Tier 6 through 8 allowing for failover in the case of server going offline.Selected internal applications must have the data hosted in single Microsoft Azure SQL Databases.* Tier 1 internal applications on the premium P2 tier* Tier 2 internal applications on the standard S4 tierThe solution must support migrating databases that support external and internal application to Azure SQL Database. The migrated databases will be supported by Azure Data Factory pipelines for the continued movement, migration and updating of data both in the cloud and from local core business systems and repositories.Tier 7 and Tier 8 partner access must be restricted to the database only.In addition to default Azure backup behavior, Tier 4 and 5 databases must be

on a backup strategy that performs a transaction log backup eve hour, a differential backup of databases every day and a full back up every week.Back up strategies must be put in place for all other standalone Azure SQL Databases using Azure SQL-provided backup storage and capabilities.DatabasesContoso requires their data estate to be designed and implemented in the Azure Cloud. Moving to the cloud must not inhibit access to or availability of data. Databases:Tier 1 Database must implement data masking using the following masking logic: Tier 2 databases must sync between branches and cloud databases and in the event of conflicts must be set up for conflicts to be won by on-premises databases.Tier 3 and Tier 6 through Tier 8 applications must use database density on the same server and Elastic pools in a cost-effective manner.Applications must still have access to data from both internal and external applications keeping the data encrypted and secure at rest and in transit.A disaster recovery strategy must be implemented for Tier 3 and Tier 6 through 8 allowing for failover in the case of a server going offline.Selected internal applications must have the data hosted in single Microsoft Azure SQL Databases.* Tier 1 internal applications on the premium P2 tier* Tier 2 internal applications on the standard S4 tierReportingSecurity and monitoringSecurityA method of managing multiple databases in the cloud at the same time is must be implemented to streamlining data management and limiting management access to only those requiring access.MonitoringMonitoring must be set up on every database. Contoso and partners must receive performance reports as part of contractual agreements.Tiers 6 through 8 must have unexpected resource storage usage immediately reported to data engineers.The Azure SQL Data Warehouse cache must be monitored when the database is being used. A dashboard monitoring key performance indicators (KPIs) indicated by traffic lights must be created and displayed based on the following metrics:Existing Data Protection and Security compliances require that all certificates and keys are internally managed in an on-premises storage.You identify the following reporting requirements:* Azure Data Warehouse must be used to gather and query data from multiple internal and external databases* Azure Data Warehouse must be optimized to use data from a cache* Reporting data aggregated for external partners must be stored in Azure Storage and be made available during regular business hours in the connecting regions* Reporting strategies must be improved to real time or near real time reporting cadence to improve competitiveness and the general supply chain* Tier 9 reporting must be moved to Event Hubs, queried, and persisted in the same Azure region as the company's main office* Tier 10 reporting data must be stored in Azure BlobsIssuesTeam members identify the following issues:* Both internal and external client application run complex joins, equality searches and group-by clauses.Because some systems are managed externally, the queries will not be changed or optimized by Contoso* External partner organization data formats, types and schemas are controlled by the partner companies* Internal and external database development staff resources are primarily SQL developers familiar with the Transact-SQL language.* Size and amount of data has led to applications and reporting solutions not performing are required speeds* Tier 7 and 8 data access is constrained to single endpoints managed by partners for access* The company maintains several legacy client applications. Data for these applications remains isolated form other applications. This has led to hundreds of databases being provisioned on a per application basis

NEW QUESTION: 2 Which two options are forms of redundancy provided by Cisco Unified Communications Manager?(Choose two.)**A.** voice-mail redundancy**B.** media resource redundancy**C.** emergency responder redundancy**D.** CTI redundancy**Answer: B,D**

NEW QUESTION: 3 Your company uses seminars and trade shows as its two primary methods to generate leads.You want to analyze which method generates the most leads.You need to generate a report that displays the number leads generated from trade shows and the number of leads generated from seminars.Which report should you use?**A.** Sales History**B.** Neglected Leads**C.** Sales Pipeline**D.** Lead Source Effectiveness**Answer: D**Explanation: Explanation/Reference:ExplanationLead Source Effectiveness reportFind out which type of

lead is most beneficial in helping you grow your business. This report helps you compare how effective your lead sources are at generating quality opportunities.The report lists the percentage of qualified leads, and leads that generate revenue for each lead category.
