NEW QUESTION: 1 Which two actions influence the EIGRP route selection process? (Choose two)
A. The router calculates the best backup path to the destination route and assigns it as the feasible successor.
B. The advertised distance is calculated by a downstream neighbor to inform the local router of the bandwidth on the link
C. The router calculates the feasible distance of all paths to the destination route
D. The router calculates the reported distance by multiplying the delay on the exiting Interface by 256.
E. The router must use the advertised distance as the metric for any given route
Answer: A,C
Explanation: Explanation The reported distance (or advertised distance) is the cost from the neighbor to the destination. It is calculated from the router advertising the route to the network. For example in the topology below, suppose router A & B are exchanging their routing tables for the first time. Router B says "Hey, the best metric (cost) from me to IOWA is 50 and the metric from you to IOWA is 90" and advertises it to router A. Router A considers the first metric (50) as the Advertised distance. The second metric (90), which is from NEVADA to IOWA (through IDAHO), is called the Feasible distance. The reported distance is calculated in the same way of calculating the metric. By default (K1 = 1, K2 = 0, K3 = 1, K4 = 0, K5 = 0), the metric is calculated as follows:

NEW QUESTION: 2

脅威アクターがどの要素を使用してターゲットネットワークへの可能性のある開口部を発見し、アナリストが悪意のあるトラフィックのプロトコルを決定するために使用できますか？
A. SMTP応答
B. IPアドレス
C. TTL
D. ポート
Answer: D

NEW QUESTION: 3 Which of the following is the BEST approach to mitigate online brute-force attacks on user accounts?
A. Strong passwords that are changed periodically
B. User awareness
C. Passwords stored in encrypted form
D. Implementation of lock-out policies
Answer: D
Explanation: Implementation of account lock-out policies significantly inhibits brute-force attacks. In cases where this is not possible, strong passwords that are changed periodically would be an appropriate choice. Passwords stored in encrypted form will not defeat an online brute-force attack if the password itself is easily guessed. User awareness would help but is not the best approach of the options given.

NEW QUESTION: 4 Which of the following is the appropriate network structure used to protect servers and services that must be provided to external clients without completely eliminating access for internal users?
A. VLAN
B. DMZ
C. Subnet
D. NAC
Answer: B
