For instance, preparing the CGRC exam needs great energy and time input, It can be printed out and download unlimited times.

NEW QUESTION: 1Your network contains an Active Directory domain. All client computers run Windows 8 Enterprise. Your company uses virtual smart cards. A user named User1 requires a virtual smart card on a new client computer named Computer1. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)**A.** Run the Enable-BitLocker cmdlet.**B.** Enroll User1 for a certificate.**C.** Enroll Computer1 for a certificate.**D.** Run the tpmvscmgr.exe command.**Answer: B, D**Explanation: A: Smart cards (virtual or otherwise) are based on digital certificates, which means you need a Public Key Infrastructure (PKI). A Windows Server 2012 certification authority (CA) has two default certificate templates that can be used for issuing smart card certificates. The Smartcard Logon template is appropriate when the card's use will be for logging on only. If you want users to be able to use the certificate for encrypting email, use the Smartcard User template. C: To create a Virtual Smart Card, use the Tpmvscmgr.exe command line utility.

NEW QUESTION: 3HOTSPOT You need to implement the file share for the new virtual desktop environment. How should you configure the implementation? To answer, select the appropriate option from each list in the answer area.**Answer:** Explanation: Topic 7, Contoso, Ltd Case D Overview Contoso, Ltd., is a manufacturing company that makes several different components that are used in automobile production. Contoso has a main office in Detroit, a distribution center in Chicago, and branch offices in Dallas, Atlanta, and San Diego. The contoso.com forest and domain functional level are Windows Server 2008 R2. All servers run Windows Server 2012 R2, and all client workstations run Windows 7 or Windows 8. Contoso uses System Center 2012 Operations Manager and Audit Collection Services (ACS) to monitor the environment. There is no certification authority (CA) in the environment. Current Environment The contoso.com domain contains the servers as shown in the following table: Contoso sales staff travel within the United States and connect to a VPN by using mobile devices to access the corporate network. Sales users authenticate to the VPN by using their Active Directory usernames and

passwords. The VPN solution also supports certification-based authentication. Contoso uses an inventory system that requires manually counting products and entering that count into a database. Contoso purchases new inventory software that supports wireless handheld scanners and several wireless handheld scanners. The wireless handheld scanners run a third party operating system that supports the Network Device Enrollment Service (NDES). Business Requirements Security The wireless handheld scanners must use certification-based authentication to access the wireless network. Sales users who use mobile devices must use certification-based authentication to access the VPN. When sales users leave the company, Contoso administrators must be able to disable their VPN access by revoking their certificates. Monitoring All servers must be monitored by using System Center 2012 Operating Manager. In addition to monitoring the Windows operating system, you must collect security logs from the CA servers by using ACS, and monitor the services that run on the CA and Certificate Revocation List (CRL) servers, such as certification authority and web services. Technical Requirements CA Hierarchy Contoso requires a two-tier CA hierarchy. The CA hierarchy must include a stand-alone offline root and two Active Directory-integrated issuing CAs: one for issuing certificates to domain-joined devices, and one for issuing certificates to non-domain-joined devices by using the NDES. CRLs must be published to two web servers: one in Detroit and one in Chicago. Contoso has servers that run Windows Server 2012 R2 to use for the CA hierarchy. The servers are described in the following table: The IT security department must have the necessary permissions to manage the CA and CRL servers. A domain group named Corp-IT Security must be used for this purpose. The IT security department users are not domain admins. Fault Tolerance The servers that host the CRL must be part of a Windows Network Load Balancing (NLB) cluster. The CRL must be available to users in all locations by using the hostname crl.contoso.com, even if one of the underlying web servers is offline.
