NEW QUESTION: 1You work as a Network Administrator for Tech Perfect Inc. The company has a TCP/IP-based network. Rick, your assistant, is configuring some laptops for wireless access. For security, WEP needs to be configured for wireless communication. By mistake, Rick configures different WEP keys in a laptop than that is configured on the Wireless Access Point (WAP). Which of the following statements is true in such situation?**A.** The laptop will be able to access the wireless network but other wireless devices will be unable to communicate with it.**B.** The laptop will be able to access the wireless network but the security will be compromised**C.** The WAP will allow the connection with the guest account's privileges.**D.** The laptop will not be able to access the wireless network.**Answer: D**

NEW QUESTION: 2DRAG DROPSelect the protocols and port numbers from the left, and drag them to the corresponding traffic types on the right. Not all protocols and port numbers will be used.Select and Place:**Answer:** Explanation:Explanation/Reference:Section: Considerations for Expanding an Existing Network ExplanationExplanation:Lightweight Access Point Protocol (LWAPP) uses User Datagram Protocol (UDP) port 12222 for data traffic and UDP port 12223 for control traffic. LWAPP is a protocol developed by Cisco and is used as part of the Cisco Unified Wireless Network architecture. LWAPP creates a tunnel between a lightweight access point (LAP) and a wireless LAN controller (WLC)? in LWAPP operations, both a LAP and a WLC are required. The WLC handles many of the management functions for the link, such as user authentication and security policy management, whereas the LAP handles real-time operations, such as sending and receiving 802.11 frames, wireless encryption, access point (AP) beacons, and probe messages. Cisco WLC devices prior to software version 5.2 use LWAPP. Control and Provisioning of Wireless Access Points (CAPWAP) uses UDP port 5246 for control traffic and UDP port 5247 for data traffic. CAPWAP is a standards-based version of LWAPP. Cisco WLC devices that run software version 5.2 and later use CAPWAP instead of LWAPP.Neither LWAPP nor CAPWAP use Transmission Control Protocol (TCP) for communication. TCP is a connection-oriented protocol. Because UDP is a connectionless protocol, it does not have the additional connection overhead that TCP has? therefore, UDP is faster but less reliable. Reference:Cisco: LWAPP Traffic StudyIETF: RFC 5415: Control And Provisioning of Wireless Access Points (CAPWAP) Protocol Specification
