NEW QUESTION: 1 Which two features are available when ZFS Storage Appliances are clusters?
A. Clients are provided with a unified file system namespace across multiple appliances.
B. Load balancing among multiple heads is allowed.
C. Rolling upgrade of software is allowed.
D. A peer appliance can provide service while repairs are being performed.
Answer: C, D
Explanation: As an alternative to incurring hours or days of downtime while the head is repaired, clustering allows a peer appliance to provide service while repair or replacement is performed. Clusters support rolling upgrade of software, which can reduce the business disruption associated with migrating to newer software.

NEW QUESTION: 2 What are three advantages of NAS? (Choose three.)
A. It provides a high-speed, dedicated network between clients and storage servers.
B. It provides a high-speed, shared network between clients and storage servers.
C. The file services can be extended to hundreds of devices.
D. Clients running different operating systems can share the same files.
E. It can be expensive to install, deploy and manage.
Answer: B, C, D
