NEW QUESTION: 3 Refer to the exhibit. Which item is not authenticated by ESP in tunnel mode?**A.** Original IP header**B.** ESP header**C.** New IP header**D.** ESP trailer**E.** Data**F.** TCP-UDP header**Answer: C** Explanation: AH provides authentication for as much of the IP header as possible, as well as for next level protocol data. However, some IP header fields may change in transit and the value of these fields, when the packet arrives at the receiver, may not be predictable by the sender. The values of such fields cannot be protected by AH. Thus, the protection provided to the IP header by AH is piecemeal. ESP does not protect any IP header fields unless those fields are encapsulated by ESP (e.g., via use of tunnel mode).
