**NEW QUESTION: 2**The quarterly data required by SEC Regulation S-K have been omitted.

Which of the following statements must be included in the auditor's report?**A.** The auditor was unable to review the data.**B.** The company's internal control provides an adequate basis to complete the review.**C.** The auditor will review the selected data during the review of the subsequent quarterly financial data.**D.** The company has not presented the selected quarterly financial data.**Answer: D**Explanation:Explanation/Reference:Explanation:Choice "C" is correct. If the quarterly data required by SEC Regulation S-K have been omitted, the auditor's report

must include a statement indicating that the company has not presented such data. Choice "A" is incorrect. The auditor's report should only state that the auditor was unable to review quarterly data required by SEC Regulation S-K when the data have been included, but the auditor has not reviewed such data. Choice "B" is incorrect. Generally, the auditor's report does not make reference to a review of interim financial information, since such information is not a required part of GAAP financial statements. (Note, however, that the auditor's report might be modified to indicate that the company's internal control was not sufficient to provide an adequate basis for a review of such information, in situations where quarterly data is included but not reviewed). Choice "D" is incorrect. If an entity is required to file quarterly reports, a review of this quarterly data is also required. Such review should be completed before the quarterly report is filed, not postponed to a subsequent quarter.

**NEW QUESTION: 3** Examine the structure of the INVOICE table: Exhibit: Which two SQL statements would execute successfully? (Choose two.)  
**A.** SELECT inv\_no, NVL2(inv\_date, sysdate-inv\_date, sysdate) FROM invoice;  
**B.** SELECT inv\_no, NVL2(inv\_amt, inv\_date, 'Not Available') FROM invoice;  
**C.** SELECT inv\_no, NVL2(inv\_amt, inv\_amt\*.25, 'Not Available') FROM invoice;  
**D.** SELECT inv\_no, NVL2(inv\_date, 'Pending', 'Incomplete') FROM invoice;  
**Answer: A, D**  
Explanation: The NVL2 Function  
The NVL2 function provides an enhancement to NVL but serves a very similar purpose. It evaluates whether a column or expression of any data type is null or not.  
5-6 The NVL function  
If the first term is not null, the second parameter is returned, else the third parameter is returned. Recall that the NVL function is different since it returns the original term if it is not null. The NVL2 function takes three mandatory parameters. Its syntax is NVL2(original, ifnotnull, ifnull), where original represents the term being tested. Ifnotnull is returned if original is not null, and ifnull is returned if original is null. The data types of the ifnotnull and ifnull parameters must be compatible, and they cannot be of type LONG. They must either be of the same type, or it must be possible to convert ifnull to the type of the ifnotnull parameter. The data type returned by the NVL2 function is the same as that of the ifnotnull parameter.

**NEW QUESTION: 4** A customer wants to export send data to their SFTP. Which two automations would accomplish this? Choose 2
