**NEW QUESTION: 1**An administrator wants to enable policy based flexible mandatory access controls on an open source OS to prevent abnormal application modifications or executions. Which of the following would BEST accomplish this?**A.** IPtables firewall**B.** SELinux**C.** HIPSD. Access control lists**Answer: B****Explanation:**The most common open source operating system is LINUX. Security-Enhanced Linux (SELinux) was created by the United States National Security Agency (NSA) and is a Linux kernel security module that provides a mechanism for supporting access control security policies, including United States Department of Defense style mandatory access controls (MAC).NSA Security-enhanced Linux is a set of patches to the Linux kernel and some utilities to incorporate a strong, flexible mandatory access control (MAC) architecture into the major subsystems of the kernel. It provides an enhanced mechanism to enforce the separation of information based on confidentiality and integrity requirements, which allows threats of tampering and bypassing of application security mechanisms to be addressed and enables the confinement of damage that can be caused by malicious or flawed applications.

**NEW QUESTION: 2**What are two key cloud challenges faces by customers? **NEW QUESTION: 3****A.** Option C**B.** Option E**C.** Option D**D.** Option A**E.** Option B**Answer: A****Explanation:**ExplanationOf the answers given, this is the only single answer that meets the requirements.Network discovery is a network setting that affects whether your computer can see (find) other computers and devices on the network and whether other computers on the network can see your computer. By default, Windows Firewall blocks network discovery, but you can enable it.When we change the CorpWired connection to public, all networks will be in the Public profile. Enabling network discovery for the Public profile will enable the computers to see other computers on each network (including HotSpot).To prevent network discovery on the HotSpot network, we can select No, don't turn on sharing or connect to devices for that network. This will disable Network discovery for the computer's connection to the HotSpot network.
