NEW QUESTION: 1 While you troubleshoot an issue with audio quality, the symptoms stop. Which troubleshooting step is next?**A.** Document the facts.**B.** Finalize the definition of the problem.**C.** Continue to gather all the facts about the situation.**D.** Finalize the observation of the results.**Answer: C**

NEW QUESTION: 2 A service provider is implementing Ethernet solutions for clients that are not being provisioned within the MPLS core network. Which solution allows the Service Provider to complete Ethernet circuit provisioning in this scenario?**A.** PPPoE**B.** VPLS**C.** AToM**D.** L2TPv3
Answer: D
Explanation: L2TPv3 defines the L2TP protocol for tunneling Layer 2 payloads over an IP core network using Layer 2 virtual private networks (VPNs). Benefits of this feature include the following: Simplifies deployment of VPNs. Does not require Multiprotocol Label Switching (MPLS) virtual private network (VPN). Supports Layer 2 tunneling over IP for any payload. Supports data encapsulation directly over IP (IP protocol number 115), not using User Datagram Protocol (UDP)

NEW QUESTION: 3 The BEST way to secure the most vulnerable attack vector for a network is to:**A.** Remove unneeded services running on the servers.**B.** Update all antivirus definitions on workstations and servers.**C.** Use biometrics and SSO for authentication.**D.** Provide end-user awareness training to office staff.**Answer: B**

NEW QUESTION: 4 You develop a set of Power Shell scripts that will run when you deploy new virtual machines (VMs). You need to ensure that the scripts are executed on new VMs. You want to achieve this goal by using the least amount of administrative effort. What should you do?**A.** Load the scripts to a common file share accessible by the VMs.**B.** Create a SetupComplete.cmd batch file to call the scripts after the VM starts.**C.** Create a new GPO to execute the scripts as a logon script.**D.** Create a new virtual hard disk (VHD) that contains the scripts.**E.** Set the VMs to execute a custom script extension.**Answer: E**
Explanation: After you deploy a Virtual Machine you typically need to make some changes before it's ready to use. This is something you can do manually or you could use Remote PowerShell to automate the configuration of your VM after deployment for example. But now there's a third alternative available allowing you customize your VM: the CustomScript extension. This CustomScript extension is executed by the VM Agent and it's very straightforward: you specify which files it needs to download from your storage account and which file it needs to execute. You can even specify arguments that need to be passed to the script. The only requirement is that you execute a .ps1 file. Reference:
