NEW QUESTION: 1You have a Microsoft SQL Server Integration Services (SSIS) package that loads data into a data warehouse each night from a transactional system. The package also loads data from a set of Comma-Separated Values (CSV) files that are provided by your company's finance department. The SSIS package processes each CSV file in a folder. The package reads the file name for the current file into a variable and uses that value to write a log entry to a database table. You need to debug the package and determine the value of the variable before each file is processed. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. **Answer:** Explanation: Explanation You debug control flows. The Foreach Loop container is used for looping through a group of files. Put the breakpoint on it. The Locals window displays information about the local expressions in the current scope of the Transact-SQL debugger. References:
