NEW QUESTION: 3 Which IPS mode is less secure than other options but allows optimal network throughput?
A. transparent mode
B. inline mode
C. Promiscuous mode
D. inline-bypass mode
Answer: C
Explanation: The recommended IPS deployment mode depends on the goals and policies of the enterprise. IPS inline mode is more secure because of its ability to stop malicious traffic in real-time, however it may impact traffic throughput if not properly designed or sized. Conversely, IPS promiscuous mode has less impact on traffic throughput but is less secure because there may be a delay in reacting to the malicious traffic.
