Answer: D

NEW QUESTION: 2 A technician receives a call that a client's PC is not booting after a recent test of the building's back-up generators. When the technician arrives, it is discovered that, once powered on, there is no output display or POST beep codes. Furthermore, after 15 seconds, the system's fans begin running much louder and faster. Which of the following is the MOST likely issue?
A. The hard drive was erased due to the power test.
B. The PC's RAM was affected by ESD.
C. The motherboard was damaged by the power test.
D. The power supply was damaged and is nonfunctional.
Answer: C

NEW QUESTION: 3 A platform validation plan is primarily concerned with guest VM settings and application delivery rather than VMware platform functionality.
A. False
B. True
Answer: A
Explanation: A validation plan can range from a detailed test plan to high-level statements. It should not be subjective. The best validation is to place a platform under a typical test of what it will be faced with in the field - for example, having a simulated number of users go through a workflow (perhaps a website). A lot of these tasks vary with the type of application and are primarily application functionality based. In addition, platform or infrastructure metrics are key for validation and for information to be used within the operational documentation (for example, troubleshooting guide, monitoring recommendations).
