If you prefer to buy a good product, our TCC-C01 actual test questions absolutely satisfy your demands.

NEW QUESTION: 1After uploading a new document format to Alfresco Content Services, you notice that it isn't showing up in the full-text search results. Which action might help you understand why?**A.** Look at the list of registered transformers to make sure the mime type of the uploaded document is transformable to text.**B.** Use Luke to check the index for the document UUID, then check the index state of that UUID.**C.** Verify the content model to make sure it was properly loaded into the repository.**D.** Inspect the current upload script, we need to manually add the indexing for new mime types there.**Answer: A**

NEW QUESTION: 2How many feet should separate the nurse and the source when extinguishing a small, wastebasket fire with an appropriate extinguisher?**A.** 4 feet**B.** 2 feet**C.** 6 feet**D.** 1 foot**Answer: C**Explanation:Explanation/Reference:Explanation:The nurse should stand about 6 feet from the source of the fire. Getting closer might put the nurse in danger. Safety and Infection Control

NEW QUESTION: 3Which of the following statements are true about locating rogue access points using WLAN discovery software such as NetStumbler, Kismet, or MacStumbler if you are using a Laptop integrated with Wi-Fi compliant MiniPCI card? (Choose two)**A.** Explanation: WLAN discovery software such as NetStumbler, Kismet, or MacStumbler can be used to detect rogue access points if the victim is using IEEE 802.11 frequency bands. However, if the victim is using non-IEEE 802.11 frequency bands or unpopular modulations, these tools might not detect rogue access. NetStumbler, kismet, or MacStumbler also gives the authorization status of an access point. A Rogue access point (AP) is set up by the attackers in an Enterprise's network. The attacker captures packets in the existing wireless LAN (WLAN) and finds the SSID and security keys (by cracking). Then the attacker sets up his own AP using the same SSID and security keys. The network clients unknowingly use this AP and the attacker captures their usernames and passwords. This can help the attacker to intrude the security and have access to the Enterprise data.**B.** These tools detect rogue access points if the victim is using IEEE 802.11 frequency bands.**C.** These tools cannot detect rogue access points if the victim is using data encryption.**D.** These tools can determine the authorization status of an access point.**E.**

These tools can determine the rogue access point even when it is attached to a wired network.
Answer: A,B,DExplanation:C are incorrect. The WLAN software such as NetStumbler, Kismet, or MacStumbler can search rogue access points even when the victim is using data encryption. However, these tools cannot determine the rogue access point even when it is attached to a wired network.

NEW QUESTION: 4The risk associated with data loss from a website which contains sensitive customer information is BEST owned by:
A. the business process owner
B. the compliance manager
C. IT security
D. the third-party website manager
Answer: A
