NEW QUESTION: 1A company hired Joe, an accountant. The IT administrator will need to create a new account for Joe. The company uses groups for ease of management and administration of user accounts. Joe will need network access to all directories, folders and files within the accounting department. Which of the following configurations will meet the requirements? **A.** Create a user account and assign the user account to the accounting group. **B.** Create an account with role-based access control for accounting. **C.** Create two accounts: a user account and an account with full network administration rights. **D.** Create a user account with password reset and notify Joe of the account creation. **Answer: B** Explanation: Role-based Access Control is basically based on a user's job description. When a user is assigned a specific role in an environment, that user's access to objects is granted based on the required tasks of that role. The IT administrator should, therefore, create an account with role-based access control for accounting for Joe.

NEW QUESTION: 2DRAG DROP You are designing an extract, transform, load (ETL) process with SQL Server Integration Services (SSIS). Two packages, Package A and Package B, will be designed. Package A will execute Package B. Both packages must reference a file path corresponding to an input folder where files will be located for further processing. You need to

design a solution so that the file path can be easily configured with the least administrative and development effort. Which four actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.) **Answer:** Explanation: Box 1: Box 2: Box 3: Box 4: Explanation: Reference:

NEW QUESTION: 3 DRAG DROP You publish a multi-tenant application named MyApp to Azure Active Directory (Azure AD). You need to ensure that only directory administrators from the other organizations can access MyApp's web API. How should you configure MyApp's manifest JSON file? To answer, drag the appropriate PowerShell command to the correct location in the application's manifest JSON file. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. **Answer:** Explanation: Box 1: False Box 2: Global 'resourceScopeType' should be "Personal" if it's something that each user should consent to, or "Global" if it's something that applies to the entire tenant, (and thus, an administrator would have to consent to).
