Explanation:The Condition clause can be used to ensure users can only work with resources if they are MFA authenticated.Option B and C are wrong since the aws:MultiFactorAuthPresent clause should be marked as true. Here you are saying that onl if the user has been MFA activated, that means it is true, then allow access.Option D is invalid because the "boor clause is missing in the evaluation for the condition clause.Boolean conditions let you construct Condition elements that restrict access based on comparing a key to "true" or "false." Here in this scenario the boot attribute in the condition element will return a value True for option A which will ensure that access is allowed on S3 resources.For more information on an example on such a policy, please visit the following URL:
