**NEW QUESTION: 3**Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 R2. Server1 has the Remote Access server role installed.You log on to Server1 by using a user account named User2. From the Remote Access Management Console, you run the Getting Started Wizard and you receive a warning message as shown in the exhibit. (Click the Exhibit button.)You need to ensure that you can configure DirectAccess successfully. The solution must minimize the number of permissions assigned to User2.To which group should you add User2?A.

AdministratorsB. Account OperatorsC. Server OperatorsD. Enterprise Admins**Answer: A**  
Explanation:Explanation/Reference:Explanation:You must have privileges to create WMI filters

in the domain in which you want to create the filter. Permissions can be changed by adding a user to the Administrators group. Administrators (A built-in group) After the initial installation of the operating system, the only member of the group is the Administrator account. When a computer joins a domain, the Domain Admins group is added to the Administrators group. When a server becomes a domain controller, the Enterprise Admins group also is added to the Administrators group. The Administrators group has built-in capabilities that give its members full control over the system. The group is the default owner of any object that is created by a member of the group. This example logs in as a test user who is not a domain user or an administrator on the server. This results in the error specifying that DA can only be configured by a user with local administrator permissions. References:
