Of course, our ICS-SCADA study materials can bring you more than that.

NEW QUESTION: 1vSphere Availability considers which two factors for virtual machine restarts? (Choose two.)**A.** resource reservations**B.** NUMA node size**C.** file accessibility**D.** Host Isolation Response**Answer: A,C****Explanation:**Explanation/Reference:Reference: <https://docs.vmware.com/en/VMware-vSphere/6.5/vsphere-esxi-vcenter-server-65-availability-guide.pdf> page 16-17

NEW QUESTION: 2What statement about 802.3. Clause 33 Power over Ethernet is true?**A.** When using CAT5 cabling, you increase the maximum draw available to the PD over that available with CAT6.**B.** Only endpoint PSEs are supported.**C.** Only midspan PSEs are supported.**D.** The lowest voltage drop is achieved when using CAT6 cable instead of CAT5 or CAT5e.**Answer: A**

NEW QUESTION: 3DRAG DROP**Answer:** Explanation:Explanation:Granting a user Full Control NTFS permission on a folder enables that user to take ownership of the folder unless the user is restricted in some other way. Be cautious in granting Full Control. If you want to manage folder access by using NTFS permissions exclusively, set share permissions to Full Control for the Everyone group. NTFS permissions affect access both locally and remotely. NTFS permissions apply regardless of protocol. Share permissions, by contrast, apply only to network shares. Share permissions do not restrict access to any local user, or to any terminal server user, of the computer on which you have set share permissions. Thus, share permissions do not provide privacy between users on a computer used by several users, nor on a terminal server accessed by several users.
