NEW QUESTION: 1 An administrator needs to secure a wireless network and restrict access based on the hardware address of the device. Which of the following solutions should be implemented?
A. Upgrade to WPA2 encryption
B. Use a stateful firewall
C. Enable MAC filtering
D. Force the WAP to use channel 1
Answer: C
Explanation: MAC addresses are also known as an Ethernet hardware address (EHA), hardware address or physical address. Enabling MAC filtering would allow for a WAP to restrict or allow access based on the hardware address of the device.
Incorrect Answers:
A. A stateful inspection firewall is aware that any valid outbound communication will trigger a corresponding response or reply from the external entity. It will not, however, restrict access based on the hardware address of the device.
C. WPA2 encryption would prevent access if the correct password or passphrase is not entered. It will not, however, restrict access based on the hardware address of the device.
D. Forcing the WAP to use channel 1 will help if there are multiple WAPs using the same channel. It will not, however, restrict access based on the hardware address of the device.
