NEW QUESTION: 4 Case Study: 5 - Dress4win Company Overview Dress4win is a web-based company that helps their users organize and manage their personal wardrobe using a website and mobile application. The company also cultivates an active social network that connects their users with designers and retailers. They monetize their services through advertising, e-commerce, referrals, and a freemium app model. The application has grown from a few servers in the founder's garage to several hundred servers and appliances in a collocated data center. However, the capacity of their infrastructure is now insufficient for the application's rapid growth. Because of this growth and the company's desire to innovate faster. Dress4Win is committing to a full migration to a public cloud. Solution Concept For the first phase of their migration to the cloud, Dress4win is moving their development and test environments. They are also building a disaster recovery site, because their current infrastructure is at a single location. They are not sure which components of their architecture they can migrate as is and which components they need to change before migrating them. Existing Technical Environment The Dress4win application is served out of a single data center location. All servers run Ubuntu

Improve business agility and speed of innovation through rapid provisioning of new resources. * Analyze and optimize architecture for performance in the cloud. * Technical Requirements Easily create non-production environment in the cloud. * Implement an automation framework for provisioning resources in cloud. * Implement a continuous deployment process for deploying applications to the on-premises* datacenter or cloud. Support failover of the production environment to cloud during an emergency. * Encrypt data on the wire and at rest. * Support multiple private connections between the production data center and cloud* environment. Executive Statement Our investors are concerned about our ability to scale and contain costs with our current infrastructure. They are also concerned that a competitor could use a public cloud platform to offset their up-front investment and free them to focus on developing better features. Our traffic patterns are highest in the mornings and weekend evenings; during other times, 80% of our capacity is sitting idle. Our capital expenditure is now exceeding our quarterly projections. Migrating to the cloud will likely cause an initial increase in spending, but we expect to fully transition before our next hardware refresh cycle. Our total cost of ownership (TCO) analysis over the next 5 years for a public cloud strategy achieves a cost reduction between 30% and 50% over our current model. For this question, refer to the Dress4Win case study. You want to ensure that your on-premises architecture meets business requirements before you migrate your solution. What change in the on-premises architecture should you make? **A.** Resize compute resources to match predefined Compute Engine machine types. **B.** Replace RabbitMQ with Google Pub/Sub. **C.** Containerize the micro services and host them in Google Kubernetes Engine. **D.** Downgrade MySQL to v5.7, which is supported by Cloud SQL for MySQL. **Answer: A**
