**A.** VPNv4 is not configured between PE1 and PE3.  
**B.** After you configure route-target import 999:999 for a VRF on PE3, the route will be accepted.  
**C.** After you configure route-target import 999:999 for a VRF on PE1, the route will be accepted.  
**D.** PE1 will reject the route due to automatic route filtering.  
**E.** address-family ipv4 vrf is not configured on PE3.  
**Answer: C, D**  
**Explanation:** The route target extended community for VPLS auto-discovery defines the import and export policies that a VPLS instance uses. The export route target sets an extended community attribute number that is appended to all routes that are exported from the VPLS instance. The import route target value sets a filter that determines the routes that are accepted into the VPLS instance. Any route with a value in its import route target contained in its extended community field matching the value in the VPLS instance's import route target are accepted. Otherwise the route is rejected.
