NEW QUESTION: 1 Lynne runs a small hotel, and as a value added service for her customers she has implemented a Wi-Fi hot-spot. Lynne has read news articles about how hackers wait at hot-spots trying to take advantage of unsuspecting users. She wants to avoid this problem at her hotel.What is an efficient and practical step that Lynne can take to decrease the likelihood of active attacks on her customers' wireless computers?**A.** Enable station-to-station traffic blocking by the access points in the hotel**B.** Require EAP-FAST authentication and provide customers with a username/password on their receipt**C.** Implement Network Access Control (NAC) and require antivirus and firewall software along with OS patches**D.** Implement an SSL VPN in the WLAN controller that initiates after HTTPS login**Answer: A**

NEW QUESTION: 2A company uses SharePoint 2013 Server as its intranet portal. The Marketing department publishes manynews articles, press releases, and corporate communications to the intranet home page.You need to ensure that the Marketing department pages do not impact intranet performance. Which twoactions should you perform? (Each correct answer presents part of the solution.Choose two.)**A.** Configure IIS to use the Super User and Super Reader accounts for caching.**B.** Use the Farm Configuration Wizard to configure the Super User and Super Reader accounts.**C.** In Central Administration, set up a User Policy for the Super User and Super Reader accounts.**D.** Use Windows PowerShell to add the Super User and Super Reader accounts.**Answer: C,D**Explanation:A: The way to correct this problem is to first create two normal user accounts in AD. These are not service accounts. You could call them domainsuperuser and domainsuperreader, but of course that's up to you. The domainsuperuser account needs to have a User Policy set for that gives it Full Control to the entire web application.D: If you are using any type of claims based authentication you will need to use Windows PowerShell. AndWindows PowerShell is the hipper more modern and sustainable option anyway. If you are using classicmode authentication run the following cmdlets on one of your SharePoint servers:$w = Get-SPWebApplication "http://<server>/" $w.Properties["portalsuperuseraccount"] = "domainsuperuser" $w.Properties["portalsuperreaderaccount"] ="domainsuperreader" $w.Update()If you are using claims based authentication run these cmdlets on one of your SharePoint servers:$w = Get-SPWebApplication "http://<server>/"$w.Properties["portalsuperuseraccount"] = "i:0#.w|domainsuperuser" $w.Properties["portalsuperreaderaccount"] = "i:0#.w|domainsuperreader" $w.Update()Note:* If you have a SharePoint Publishing site and you check the event viewer every once in a while you might see the following warning in there: Object Cache: The super user account utilized by the cache is not configured. This can increase

the number of cache misses, which causes the page requests to consume unneccesary system resources. To configure the account use the following command 'stsadm -o setproperty -propertyname portalsuperuseraccount -propertyvalue account -url webappurl'. The account should be any account that has Full Control access to the SharePoint databases but is not an application pool account. Additional Data: Current default super user account: SHAREPOINTsystem This means that the cache accounts for your web application aren't properly set and that there will be a lot of cache misses. If a cache miss occurs the page the user requested will have to be build up from scratch again. Files and information will be retrieved from the database and the file system and the page will be rendered. This means an extra hit on your SharePoint and database servers and a slower page load for your end user.Reference: Resolving "The super user account utilized by the cache is not configured."

NEW QUESTION: 3展示を参照してください。SW02のFastEthernet0 / 2でvlan 2,3,4コマンドを許可したスイッチポートトランクを入力した結果の説明は正しいですか？**A.** VLANがすでに手動でプルーニングされているトランクでは、コマンドはサポートされていません **B.** 2つのワークステーションはVLAN 5上にあるため通信を停止します。これはトランクでは許可されていません**C.** 実行コンフィギュレーションは、Fa0 / 2のVLAN 1〜5を許可するスイッチポートトランクを表示します**Answer: B**
