Photoexperienceacademy SAP C-S43-2022 PDF has all Real Exam Questions.

**NEW QUESTION: 1**[According to the PRMIA study guide for Exam 1, Simple Exotics and Convertible Bonds have been excluded from the syllabus. You may choose to ignore this question. It appears here solely because the Handbook continues to have these chapters.]  
What is the current conversion premium for a convertible bond where \$100 in market value of the bond is convertible into two shares and the current share price is \$50?  
**A. 0**  
**B. None of the above**  
**C. 1**  
**D. 0.5**  
**Answer: C**  
**Explanation:** Explanation Since \$100 is convertible into two shares, the price upon conversion per share is \$50, which is the same as the current share price. Therefore there is no premium, and Choice 'c' is the correct answer.

**NEW QUESTION: 2**What can you do to minimize the downtime to the virtual machines (VMs) when taking an ESX Server down for maintenance?  
**A. create a clone of the VM**  
**B. migrate the VMs with VMotion**  
**C. migrate the VMs to a different datastore**  
**D. suspend VMs to preserve state information**  
**Answer: B**

**NEW QUESTION: 3**Which statement correctly describes the function of a private VLAN?  
**A. A private VLAN enables the creation of multiple VLANs using one broadcast domain.**  
**B. A private VLAN combines the Layer 2 broadcast domains of many VLANs into one major broadcast domain.**  
**C. A private VLAN partitions the Layer 3 broadcast domain of a VLAN into subdomains.**  
**D. A private VLAN partitions the Layer 2 broadcast domain of a VLAN into subdomains.**  
**Answer: D**  
**Explanation:** A private VLAN partitions the Layer 2 broadcast domain of a VLAN into subdomains, allowing you to isolate the ports on the switch from each other. A subdomain consists of a primary VLAN and one or more secondary VLANs. All VLANs in a private VLAN domain share the same primary VLAN. The secondary VLAN ID differentiates one subdomain from another. The secondary VLANs may either be isolated VLANs or community VLANs. A host on an isolated VLAN can only communicate with the associated promiscuous port in its primary VLAN. Hosts on community VLANs can communicate among themselves and with their associated promiscuous port but not with ports in other community VLANs.
