NEW QUESTION: 3 After installing and customizing an Oracle Solaris 11 non-global (solaris brand) zone, you execute commands: # zonecfg -z myzone 'set

file-mac-profile=fixed-configuration' # zoneadm -z myzone reboot What is the impact of making

this specific change? **A.** This change restricts user access to objects in the zone based upon their

Oracle Solaris Trusted Extension labels. **B.** This change prevents the zone from being able to

mount any remote file systems on the zone has been booted. **C.** This enables support within

the zone for Mac OS X extended file attributes for the zone root file system. **D.** This change

forces the zone root file system into a read-only state where only parts of /var are writable. **E.**

This change prevents MAC address spoofing by requiring outbound network packets to have a

predefined value. **Answer: D** Explanation: Through the zonecfg utility, the file-mac-profile can

be set to one of the following values (see note below). All of the profiles except none will cause

the /var/pkg directory and its contents to be read-only from inside the zone. *none Standard,

read-write, non-global zone, with no additional protection beyond the existing zones

boundaries. Setting the value to none is equivalent to not setting file-mac-profile property. *

strict *fixed-configuration Permits updates to /var/* directories, with the exception of

directories that contain system configuration components. IPS packages, including new

packages, cannot be installed. Persistently enabled SMF services are fixed. SMF manifests

cannot be added from the default locations. Logging and auditing configuration files can be local. syslog and audit configuration are fixed.* flexible-configuration Note: zonecfg file-mac-profile Property By default, the zonecfg file-mac-profile property is not set in a non-global zone. A zone is configured to have a writable root dataset. In a solaris read-only zone, the file-mac-profile property is used to configure a read-only zone root. A read-only root restricts access to the runtime environment from inside the zone. Reference: Oracle Solaris Administration: Oracle Solaris Zones, Oracle Solaris 10 Zones, and Resource Management
