NEW QUESTION: 2 Your network environment includes remote employees. You need to create a secure connection for the remote employees who require access to your Azure virtual network. What should you do? **A.** Deploy Windows Server 2012 RRAS. **B.** Configure a site-to-site VPN. **C.** Configure an ExpressRoute. **D.** Configure a point-to-site VPN. **Answer: D** Explanation: New Point-To-Site Connectivity With today's release we've added an awesome new feature that allows you to setup VPN connections between individual computers and a Windows Azure virtual network without the need for a VPN device. We call this feature Point-to-Site Virtual Private Networking. This feature greatly simplifies setting up secure connections between Windows Azure and client machines, whether from your office environment or from remote locations. It is especially useful for developers who want to connect to a Windows Azure Virtual Network (and to the individual virtual machines within it) from either behind their corporate firewall or a remote location. Because it is point-to-site they do not need their IT staff to perform any activities to enable it, and no VPN hardware needs to be installed or configured. Instead you can just use the built-in Windows VPN client to tunnel to your Virtual Network in Windows Azure. References: <https://azure.microsoft.com/en-us/services/virtual-network/>
