NEW QUESTION: 1 A security consultant is trying to attack a device with a previously identified user account. Which of the following types of attacks is being executed?
A. Pass the hash attack
B. Credential dump attack
C. Reverse shell attack
D. DLL injection attack
Answer: A

NEW QUESTION: 2 Joe, a technician at the local power plant, notices that several turbines had ramp up in cycles during the week. Further investigation by the system engineering team determined that a timed .exe file had been uploaded to the system control console during a visit by international contractors. Which of the following actions should Joe recommend?
A. Implement stronger WPA2 Wireless
B. Create a VLAN for the SCADA
C. Enable PKI for the MainFrame
D. Implement patch management
Answer: B
Explanation: VLANs are used for traffic management. VLANs can be used to isolate traffic between network segments. This can be accomplished by not defining a route between different VLANs or by specifying a deny filter between certain VLANs (or certain members of a VLAN). Any network segment that doesn't need to communicate with another in order to accomplish a work task/function shouldn't be able to do so.
Incorrect Answers: B. PKI focuses on proving the identity of communication partners, providing a means to securely exchange session-based symmetric encryption keys through asymmetric cryptographic solutions, and providing a means to protect message integrity through the use of hashing. C. Patch management is the formal process of ensuring that updates and patches are properly tested and applied to production systems. D. Implementing stronger WPA2 Wireless will not solve the problem of keeping the networks separate.

NEW QUESTION: 3 Which of the following is an example of a risk avoidance response?
A. Outsourcing a high risk process to a third party.
B. Selling a non-strategic business unit.
C. Hedging against natural gas price fluctuations.
D. Buying an insurance policy to protect against loss events.
Answer: B
