The bridgehead server receives information

replicated from other sites and replicates it to its site's other domain controllers. It ensures that the greatest portion of replication occurs within sites rather than between them. In most cases, the KCC automatically decides which domain controller acts as the bridgehead server. However, you can use Active Directory Sites and Services to specify which domain controller will be the preferred bridgehead server by using the following steps: 1. In Active Directory Sites and Services, expand the site in which you want to specify the preferred bridgehead server. 2. Expand the Servers folder to locate the desired server, right-click it, and then choose Properties. 3. From the list labeled Transports available for intersite data transfer, select the protocol(s) for which you want to designate this server as a preferred bridgehead server and then click add.
