**NEW QUESTION: 1** You need to allocate the current average amount of bandwidth that is required for peer-to-peer (P2P) voice calls for three sites. How much bandwidth in kilobits per second (Kbps) should you allocate? **A.** 36,960 Kbps **B.** 80,025 Kbps **C.** 51,150 Kbps **D.** 139,795 Kbps **Answer: C**

**NEW QUESTION: 2** DRAG DROP **Answer:** Explanation: Explanation: Box 1: DirectAccess authentication Box 2: Path-based site collections Note: \*From scenario: Automate the sign-in experience by using the local AD FS 2.0 servers for AD FS single sign-on (SSO). \*The Corporate Projects site collection must be available to internal users who connect from outside of the corporate network and must not require a VPN connection \*DirectAccess authenticates the computer before the user logs on. Typically, computer authentication grants access only to domain controllers and DNS servers. After the user logs on, DirectAccess authenticates the user, and the user can connect to any resources he or she is authorized to access. DirectAccess supports standard user authentication using a computer certificate and user account name and password credentials. DirectAccess supports standard user authentication using a computer certificate and user account name and password credentials. For greater security, you can implement additional authorization with smart cards. This type of configuration allows users to access Internet resources without their smart cards, but requires a smart card before users can connect to intranet resources. A user must insert a smart card in addition to typing his or her user credentials. Smart card authorization prevents an attacker who acquires a user's password (but not the smart card) from accessing the intranet. Similarly, an attacker who acquires the smart card but does not know the user's password does not have access. When smart cards are required for end-to-end authentication, you must use Active Directory Domain Services (AD DS) in Windows Server 2008 R2. \*From scenario: Ensure that a web usage report that contains traffic reports, search reports, and inventory reports can be provided for any site. \*Microsoft SharePoint supports both path-based and host-named site collections. The primary difference between path-based and host-named site collections is that all path-based site collections in a Web application share the same host name (DNS name), and each host-named

site collection in a Web application is assigned a unique DNS name. Path-based site collections  
Ex: <http://www.company.com/sites/cust1> <http://www.company.com/sites/cust2>  
<http://www.company.com/sites/cust3> Host-named site collections Ex:  
<http://cust1.company.com> <http://cust2.company.com>
