## **High-efficiency SAFe-SASM Exam Practice Bootcamp Materials are wise for you - Photoexperienceacademy**

Our SAFe-SASM exam resources are always imitated all the time, but never be surpassed, Although our SAFe Advanced Scrum Master (SASM) examkiller exam dumps have high passing rate, there are still some factor resulting in actual test failure.

With SAFe Advanced Scrum Master (SASM) exam dump, does there still anything deter you for your certification, Up to now, more than 98 percent of buyers of our SAFe-SASM latest dumps have passed it successfully.

Each format has distinct strength and shortcomings, We also [SAFe-SASM](#) comfort you with ease of its criteria, Let us take a succinct look of some features of our products as follows.

We have introduced an innovative product that will help you climb the ladder of success and make a glorious career, What's more, if you fail the SAFe-SASM test unfortunately, we will give you full refund without any hesitation.

Don't be silly, SAFe-SASM dumps only complicate your goal to pass your Scrum SAFe-SASM quiz, in fact the Scrum SAFe-SASM braindump could actually ruin your reputation and credit you as a fraud.

## **SAFe-SASM Exam Questions and Answers Are of High Quality - Photoexperienceacademy**

You will make progress and obtain your desired certification with our topping SAFe-SASM exam dumps for we own the first-class quality as well as the first-class customer service online.

And as our pass rate of the SAFe-SASM learning guide is high as 98% to 100%, you will pass the exam for sure, It is automatically sent via email, you don't worry that it will need too much time.

The brainstorming questions with adequate practice material will help you get excellent points in SAFe-SASM exam, As long as you use SAFe-SASM test guide, you can certainly harvest what you want thing.

SAFe-SASM practice materials can expedite your review process, inculcate your knowledge of the exam and last but not the least, speed up your pace of review dramatically.

All education staff are required master degree or above, **New SAFe-SASM Mock Test** 5 years' industrial experience and spacious interpersonal relationship in international large companies.

Our custom service sticks to "Service First, Customer Foremost", If you do, you can try SAFe-SASM exam materials of us, we will help you obtain the certification with the least time.

**NEW QUESTION: 1** Cloud Kicks is a large global company. The week of global training falls on a holiday week for the European region of the office on holiday. Which best practice should the Consultant recommend to overcome this obstacle?**A.** Run the training as planned and record it so the other users can watch the video.**B.** Talk to the manager of that region and tell them how important training is and that they should come.**C.** Move training for all users to the following week and communicate the change.**D.** Set up training session for just the European region and run the scheduled training.**Answer: D**

**NEW QUESTION: 2****A.** smarthostauthmechanism**B.** requiretls**C.** domainsecureenabled**D.** ignorestarttls**E.** tlsdomain**F.** tlsaauthlevel**Answer: B,C****Explanation:** Domain Security Domain Security is a feature of Exchange Server (both 2010 and 2013) that can secure SMTP traffic between two Exchange organizations. It is implemented on server level, and it works without configuring any options on user (sender or recipient) side. Domain Security uses mutual TLS authentication to provide session-based authentication and encryption. Mutual TLS authentication is different from TLS as it's usually implemented. Usually, when you implement TLS, client will verify the server certificate, and authenticate the server, before establishing a connection. With mutual TLS authentication, each server verifies the connection with the other server by validating a certificate that's provided by that other server, so clients are not included at all. We establish secure SMTP channel between two Exchange Servers, usually over the Internet. Clients, Outlook and Outlook Web App, will be aware that Domain Security is established. Green icon with check mark will be shown on each messages exchanged between server on which Domain Security is implemented. **Set-SendConnector** Use the **Set-SendConnector** cmdlet to modify a Send connector. **EXAMPLE 1** This example makes the following configuration changes to the Send connector named **Contoso.com Send Connector**: Sets the maximum message size limit to 10 MB. Changes the connection inactivity time-out to 15 minutes. **Set-SendConnector "Contoso.com Send Connector" -MaxMessageSize 10MB -ConnectionInactivityTimeout 00:15:00** **PARAMETERS** **Requiretls** The **RequireTLS** parameter specifies whether all messages sent through this connector must be transmitted using TLS. The default value is \$false. **Domainsecureenabled** The **DomainSecureEnabled** parameter is part of the process to enable mutual Transport Layer Security (TLS) authentication for the domains serviced by this Send connector. Mutual TLS authentication functions correctly only when the following conditions are met: The value of the **DomainSecureEnabled** parameter must be \$true. The value of the **DNSRoutingEnabled** parameter must be \$true. The value of the **IgnoreStartTLS** parameter must be \$false. The wildcard character (\*) is not supported in domains that are configured for mutual TLS authentication. The same domain must also be defined on the corresponding Receive connector and in the **TLSReceiveDomainSecureList** attribute of the

transport configuration. The default value for the DomainSecureEnabled parameter is \$false for the following types of Send connectors: All Send connectors defined in the Transport service on a Mailbox server. User-created Send connectors defined on an Edge server. The default value for the DomainSecureEnabled parameter is \$true for default Send connectors defined on an Edge server.

**NOT TLSAUTHLEVEL** The TlsAuthLevel parameter specifies the TLS authentication level that is used for outbound TLS connections established by this Send connector. Valid values are: EncryptionOnly: TLS is used only to encrypt the communication channel. No certificate authentication is performed. CertificateValidation: TLS is used to encrypt the channel and certificate chain validation and revocation lists checks are performed. DomainValidation: In addition to channel encryption and certificate validation, the Send connector also verifies that the FQDN of the target certificate matches the domain specified in the TlsDomain parameter. If no domain is specified in the TlsDomain parameter, the FQDN on the certificate is compared with the recipient's domain. You can't specify a value for this parameter if the IgnoreSTARTTLS parameter is set to \$true, or if the RequireTLS parameter is set to \$false.

**NOT ignorestarttls** The IgnoreSTARTTLS parameter specifies whether to ignore the StartTLS option offered by a remote sending server. This parameter is used with remote domains. This parameter must be set to \$false if the RequireTLS parameter is set to \$true. Valid values for this parameter are \$true or \$false.

**NOT tldomain** The TlsDomain parameter specifies the domain name that the Send connector uses to verify the FQDN of the target certificate when establishing a TLS secured connection. This parameter is used only if the TlsAuthLevel parameter is set to DomainValidation. A value for this parameter is required if: The TlsAuthLevel parameter is set to DomainValidation. The DNSRoutingEnabled parameter is set to \$false (smart host Send connector).

**NOT smarthostauthmechanism** The SmartHostAuthMechanism parameter specifies the smart host authentication mechanism to use for authentication with a remote server. Use this parameter only when a smart host is configured and the DNSRoutingEnabled parameter is set to \$false. Valid values are None, BasicAuth, BasicAuthRequireTLS, ExchangeServer, and ExternalAuthoritative. All values are mutually exclusive. If you select BasicAuth or BasicAuthRequireTLS, you must use the AuthenticationCredential parameter to specify the authentication credential.

TLS Functionality and Related Terminology: Exchange 2013 Help

**NEW QUESTION: 3** Why does an unPBX play an important role in CTI? **A.** They provide the same network management features as a traditional PBX at a comparable cost of ownership. **B.** Increase the number and type of servers an organization must support. **C.** They provide the same call management features as a traditional PBX at a comparable cost of ownership. **D.** Offer less options to match communications networks to an organization's detailed requirements.

**Answer: D**

**NEW QUESTION: 4** You have a server named Server1 that runs Windows Server 2012 R2. Server1 has the Hyper-V server role installed. Server1 has 8 GB of RAM. Server1 hosts five virtual machines that run Windows Server 2012 R2. The settings of a virtual machine named Server3 are configured as shown in the exhibit. (Click the Exhibit button.) You need to ensure that when Server1 restarts, Server3 automatically resumes without intervention. The solution must prevent data loss. Which settings should you modify? **A.** Automatic Start Action **B.** Automatic Stop Action **C.** Integration Services **D.** BIOS

**Answer: B**

**Explanation:** The Automatic Stop Action setting should be modified because it will allow you to configure: "Save the virtual machine state" option instructs Hyper-V Virtual Machine Management Service to save the virtual machine state on the local disk when the Hyper-V Server shuts down. OR "Turn Off the virtual machine" is used by the Hyper-V Management Service (VMMS.exe) to gracefully turn off the virtual machine. OR "Shut down the guest operating system" is successful only if the "Hyper-V Shutdown" guest service is running in the virtual machine. The guest service is required to be running in the virtual machine as the Hyper-V VMMS.EXE process will trigger Windows Exit message which is received by the service. Once the message is received by the guest service, it takes the necessary actions to shut down the virtual machine.
