NEW QUESTION: 2 Which two statements about the function of a PIM designated router are true? (Choose two.) **A.** It sends PIM Join/Prune messages for directly connected receivers. **B.** It registers directly connected sources to the PIM rendezvous point. **C.** It sends IGMP queries. **D.** It sends PIM asserts on the interfaces of the outgoing interface list. **E.** It forwards multicast traffic from the source into the PIM network. **Answer: A, B** Explanation: In PIM ASM and SSM modes, the software chooses a designated router (DR) from the routers on each network segment. The DR is responsible for forwarding multicast data for specified groups and sources on that segment. In ASM mode, the DR is responsible for unicasting PIM register packets to the RP. When a DR receives an IGMP membership report from a directly connected receiver, the shortest path is formed to the RP, which may or may not go through the DR. The result is a shared tree that connects all sources transmitting on the same multicast group to all receivers of that group. In SSM mode, the DR triggers (*, G) or (S, G) PIM join messages toward the RP or the source. The path from the receiver to the source is determined hop by hop. The source must be known to the receiver or the DR. Reference:
