Answer: C

NEW QUESTION: 2You are examining the existing IORM configuration on the cells of Database Machine, to see if they require my modifications based on recent changes to various workloads. All seven cells in your X3-2 half-rack shown the following:Which two are true about I/O to the cells using this plan?
A. I/O requested in the interactive category may use flashdns if the I/O is from the sales or finance databases, and these I/O requests are guaranteed to get 90% of the I/O if the enough I/Os are issued in this category.
B. I/O requests from the sales database may

use flashing regardless of the I/O category. **C.** I/O requests in the batch category may use flashcache if the I/O is from the sales finance database, and these I/O requests are guaranteed to get 80% of the I/O if the interactive category I/Os use no more than 20%. **D.** No I/Os in any category or from any database may use flashing or flashcache because the objective is off. **E.** I/O requests made by sessions in the marketing database may use flashing and flashcache if no other categories or database or database are using flashing and flashcache at the same time. **Answer: B, D** Explanation: list iormplan detail Note: *The I/O Resource Manager (IORM) extends the concept of resource groups with a new attribute known as a category. While resource groups allow DBRM to manage resources within a database, categories provide I/O resource management among multiple databases. *cellcli> alter iormplan objective='balanced'-- {balanced | off | low_latency | high_throughput | auto"off" simply turns off the IORM plan's IO metering.
