**NEW QUESTION: 1**Scenario: A network engineer needs to implement high availability (HA) for a pair of NetScaler appliances. The existing appliance was recently restarted and the new appliance has been rack mounted and turned on for several weeks waiting to be configured. The engineer needs to create an HA pair, but is concerned that his original appliance will get erased when the HA pair is created. Which two tasks could the engineer do before the creation of the HA pair to ensure that the existing unit stays the main appliance? (Choose two.)**A.** Create a Route Monitor to ensure proper synchronization.**B.** Set StayPrimary on the existing node.**C.** Ensure that INC mode is enabled during creation of HA Pair.**D.** Configure StaySecondary on the new node.**E.** Enable HA Sync before adding the second node.**Answer: B,D**

**NEW QUESTION: 2**What are two challenges when deploying host-level IPS? (Choose Two)**A.** It does not provide protection for offsite computers.**B.** It is unable to detect fragmentation attacks.**C.** The deployment must support multiple operating systems.**D.** It is unable to provide a complete network picture of an attack.**E.** It is unable to determine the outcome of every attack that it detects.**Answer: C,D**Explanation: Advantages of HIPS: The success or failure of an attack can be readily determined. A network IPS sends an alarm upon the presence of intrusive activity but cannot always ascertain the success or failure of such an attack. HIPS does not have to worry about fragmentation attacks or variable Time to Live (TTL) attacks because the host stack takes care of these issues. If the network traffic stream is encrypted, HIPS has access to the traffic in unencrypted form. Limitations of HIPS: There are two major drawbacks to HIPS: + HIPS does not provide a complete network picture: Because HIPS examines information only at the local host level, HIPS has difficulty constructing an accurate network picture or coordinating the events happening across the entire network. + HIPS has a requirement to support multiple operating systems: HIPS needs to run on every system in the network. This requires verifying support for all the different operating systems used in your network. Source: <http://www.ciscopress.com/articles/article.asp?p=1336425&seqNum=3>
