Move the snapshot to the company's Amazon S3 bucket.**B.** Create an RDS snapshot schedule from the AWS Management Console to take a snapshot every 30 days.**C.** Create an AWS Lambda function to run on the first day of every month to take a manual RDS snapshot.**D.** Create an AWS Lambda function to run on the first day of every month to create an automated RDS snapshot.**Answer: A****Explanation:** Unlike automated backups, manual snapshots aren't subject to the backup retention period. Snapshots don't expire. For very long-term backups of MariaDB, MySQL, and PostgreSQL data, we recommend exporting snapshot data to Amazon S3. If the major version of your DB engine is no longer supported, you can't restore to that version from a snapshot.
