What should you do?**A.** From User Accounts, select Manage your file encryption certificates.**B.** From Authorization Manager, modify the Authorization Manager options.**C.** From Credential Manager, select Back up vault.**D.** Create an EFS Data Recovery Agent by using Group Policy.**Answer: D**

NEW QUESTION: 4 Which of the following subsystem parameters is only applicable in a data sharing environment?**A.** REFSHAGE**B.** DSMAX**C.** RETLWAIT**D.** TWOACT**Answer: C**
Explanation: This value is only significant in a data sharing environment. It indicates how long a

transaction should wait for a lock on a resource if another DB2 in the data sharing group has failed and is holding an incompatible lock on that resource. Locks held by failed DB2 members are called retained locks. This value is a multiplier that is applied to the connection's normal timeout value. For example, if the retained lock multiplier is 2, then the timeout period for a call attachment connection that is waiting for a retained lock is twice the normal CAF timeout period. The default is 0, meaning applications do not wait for incompatible retained locks, the lock request is immediately rejected and the application receives a "resource unavailable" SQLCODE. Install parameter RETAINED LOCK TIMEOUT on panel DSNTIPI, or ZPARM RETLWAIT in DSN6SPRM. This value is only significant in a data sharing environment.
