Note that it is not even a description of SSO, because the user is entering userID and password for EACH access attempt.Technology to manage passwords consistently across multiple platforms, enforcing policies such as password change intervals. This is a good description for Identity Management Password Management system, but not for Legacy SSO.Another way of referring to SESAME and KryptoKnight, now that Kerberos is the de-facto industry standard single sign on mechanism. This is a detractor.The following reference(s) were/was used to create this question:Official (ISC)2 Guide to the CISSP CBK 2007, pg 176:"many legacy systems do not support an external means to identify and authenticate users.Therefore, it is possible to store the credentials outside of the various applications and have them automatically entered on behalf of the user when an application is launched."
