NEW QUESTION: 1 Refer to the exhibit. Which application protocol is in this PCAP file? **A. SSH. B. SSL. C. TCP. D. HTTP.**
Answer: D

NEW QUESTION: 2 When a user has credentials in an IWA realm and already has been authenticated into that realm, what happens when CPL code directs that user to be authenticated as a guest? **A. They are logged in as a guest and will show in the Management Console as being logged in twice. B. Nothing; they continue to be logged in with their credentials. C. They are logged out from their previous credentials and are logged in as a guest.**
Answer: C

NEW QUESTION: 3 You need to deploy a new version of the LabelMaker application. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. **NOTE:** Each correct selection is worth one point. **Answer:** Explanation: Explanation Step 1: Build a new application image by using dockerfile Step 2: Create an alias for the image with the fully qualified path to the registry Before you can push the image to a private registry, you've to ensure a proper image name. This can be achieved using the docker tag command. For demonstration purpose, we'll use Docker's hello world image, rename it and push it to ACR. # pulls hello-world from the public docker hub \$ docker pull hello-world # tag the image in order to be able to push it to a private registry \$ docker tag hello-world <REGISTRY_NAME>/hello-world # push the image \$ docker push <REGISTRY_NAME>/hello-world Step 3: Log in to the registry and push image In order to push images to the newly created ACR instance, you need to login to ACR from the Docker CLI. Once logged in, you can push any existing docker image to your ACR instance. Scenario: Coho Winery plans to move the application to Azure and continue to support label creation. LabelMaker app Azure Monitor Container Health must be used to monitor the performance of workloads that are deployed to Kubernetes environments and hosted on Azure Kubernetes Service (AKS). You must use Azure Container Registry to publish images that support the AKS deployment.
