**NEW QUESTION: 1**In package tracking systems, read-only tags are unable to be used because the destination postal code is not contained within the tag. Read-only tags have been proposed to work in a manner so as to read the read-only tag and then access the package tracking company's database to determine the appropriate sorting, based on the postal code within the database. Which of the following would be a reason that this would not be successful?**A.** Using a reference number instead of the postal code for sorting depends upon a communications link that is not completely reliable.**B.** Read-only tags are not able to be reused and re-write tags can be re-used.**C.** When recording the destination information at package pickup it is feared that the wrong postal code will be entered.**D.** Distribution of the read-only tags to the drivers requires that each driver have a specific sequence of numbers in the tag.**Answer: A**

**NEW QUESTION: 2**Which of the following would you want to include in an education session to the staff on HIV and AIDS?**A.** With AIDS, T4 cells cannot form protective antibodies due to depleted B cells.**B.** Newborn infants of HIV positive mothers usually test positive.**C.** The hematological system is usually attacked by HIV.**D.** T lymphocytes are destroyed because the virus attacks the immune system.**Answer: D**Explanation:T lymphocytes are destroyed because the virus attacks the immune system. Infants born to mothers positive for HIV usually test positive for HIV antibodies not HIV virus. HIV attacks the immune system, not the hematological system. T4 cells are depleted in numbers and can not signal B cells.

**NEW QUESTION: 3**A storage administrator is configuring SAN switches and zoning to connect an eight X-Brick XtremIO array. A VMware ESXi server is hosted on a blade chassis with 16 HBA ports. In addition, the SAN is composed of two separate SAN switches. What is the recommended XtremIO best practice for zoning?**A.** Two HBA connections per host connected to a single switch Multiple initiators/multiple targets per zone Maximum of 4 paths for each LUN per zone**B.** Connect all N1 storage controllers to the first switch Connect N2 storage controllers to the second switch Multipath all host ports to single LUNs per zone Maximum of 4 paths for each LUN per zone**C.** Multiple HBA connections per host Single initiator/single target per zone Maximum of 2 paths to each X-Brick for each initiator Each host connected to each SAN switch**D.** Connect a single storage controller to the first switch Connect a second storage controller to the second switch Single initiator/multiple targets per zone Maximum of 6 paths for each LUN per zone**Answer: D**Explanation:In an environment where a host with two HBAs (VMware Best Practice) is connected to two fabrics and storage array with two Storage Controllers (EMC VNX, for example) the host will have four paths to a LUN: 2 Controllers x 2

HBA = 4 paths If you go to the extreme and configure your XtremIO with eight X-Brick, you have 16 controllers. Again, two HBAs per host and the max number of LUNs you can attach to an ESXi host will be 32... I understand, different OS'es may have different limits than VMware and this logic will not be applicable. If you have hit the limit of 1024 paths per host (1024 / 4 controllers / 2 HBAs = 128 LUNs) and need to provision more LUNs, the best way will be to re-zone the host to limit the number of X-Bricks / Controllers the host HBA can connect to. The following diagram displays the logical connection topology for 4 paths.

**NEW QUESTION:** 4A customer has several different storage systems from different vendors all connected on a storage area network. All arrays are at least 80% utilized, and the customer needs additional capacity. Rack space and power are very limited. Which concept should a sales specialist emphasize to convince the customer to purchase IBM Spectrum Virtualize? **A.** Virtualization **B.** Deduplication **C.** Block and file I/O **D.** Compression **Answer: A**
