NEW QUESTION: 1A computer currently runs a 32-bit version of Windows 7 Ultimate.You need to deploy a 64-bit version of Windows 8 to the computer.The new deployment must be the only version of Windows on the computer.Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)**Select and Place:****Answer:** Explanation:Section: Install and Upgrade to Windows 8 (14%) Explanation

NEW QUESTION: 2You are developing a workflow solution using Azure technologies.What should you implement to meet each requirement? To answer, select the appropriate options in the answer area.**NOTE:**Each correct selection is worth one point.**Answer:** Explanation: Explanation

NEW QUESTION: 3You currently have an on-premises Oracle database and have decided to leverage AWS and use Aurora. You need to do this as quickly as possible. How do you achieve this? Choose the correct answer.**A.** It is not possible to migrate an on-premises database to AWS at this time.**B.** Use AWS Data Migration Services and create a target database, migrate the database schema, set up the data replication process, initiate the full load and a subsequent change data capture and apply, and conclude with a switchover of your production environment to the new database once the target database is caught up with the source database.**C.** Use AWS Direct Connect with AWS Data Migration Service and immediately migrate the database schema, no provisioning of a target database is needed.**D.** Use AWS Data Pipeline and create a target database, migrate the database schema, set up the data replication process, initiate the full load and a subsequent change data capture and apply, and conclude with a switchover of your production environment to the new database once the target database is caught up with the source database.**Answer: B**Explanation:AWS Database Migration Service supports both homogenous and heterogeneous data replication. Supported database sources include: (1) Oracle, (2) SQL Server, (3) MySQL, (4) Amazon Aurora (5) PostgreSQL and (6) SAP ASE. All sources are supported on-premises, in EC2, and RDS except Amazon Aurora which is available only in RDS. RDS SQL Server is supported in bulk extract mode only; the change data capture mode (CDC) is not yet supported.CDC is supported for on-premises and EC2 SQL Server. Amazon Aurora is only available in RDS. Supported database targets include: (1) Amazon Aurora, (2) Oracle, (3) SQL Server, (4) MySQL, (5) PostgreSQL and (6) SAP ASE. All Oracle, SQL Server, MySQL and Postgres targets are supported on-premises, in EC2 and RDS while SAP ASE is supported only in EC2. Either the source or the target database (or both) need to reside in RDS or on EC2. Replication between on-premises to on-premises databases is not supported. During a typical simple database migration, you will create a target database, migrate the database schema, set up the data replication process, initiate the full load and a subsequent change data capture and apply, and conclude with a switchover of your production environment to the new database once the target database is caught up with the

NEW QUESTION: 4You need to configure access to Azure DevOps Agent pool to meet the forwarding requirements: * Use a project agent pool when authoring build release pipelines. * View the agent pool and agents of the organization. * Use the principle of least privilege. Which role memberships are required for the Azure DevOps organization and the project? To answer, drag the appropriate role membership to the correct targets. Each role membership may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to content NOTE: Each correct selection is worth one point.**Answer:** Explanation: ExplanationBox 1: ReaderMembers of the Reader role can view the organization agent pool as well as agents. You typically use this to add operators that are responsible for monitoring the agents and their health.Box 2: Service accountMembers of the Service account role can use the organization agent pool to create a project agent pool in a project. If you follow the guidelines above for creating new project agent pools, you typically do not have to add any members here.
