With this kind of version, you can flip through the pages at liberty and quickly finish the check-up AWS-Certified-Cloud-Practitioner test prep, Having a Amazon certification AWS-Certified-Cloud-Practitioner exam certificate can help people who are looking for a job get [AWS-Certified-Cloud-Practitioner](#) better employment opportunities in the IT field and will also pave the way for a successful IT career for them.

Moreover, the registered clients can enjoy special discount code for buying our products, So do not hesitate to buy our AWS-Certified-Cloud-Practitioner study materials, Do not worry, With Photoexperienceacademy's Amazon AWS-Certified-Cloud-Practitioner exam training materials in hand, any IT certification exam will become very easy.

Photoexperienceacademy has proved to be one of the most reliable and authentic dumps provider for the AWS-Certified-Cloud-Practitioner exam, You totally can afford for our AWS-Certified-Cloud-Practitioner preparation engine.

Once you decide to pass the Amazon AWS Certified Cloud Practitioner exam and get the certification, you [Examcollection H19-319 V2.0 Free Dumps](#) may encounter many handicaps that you don't know how to deal with, so, you may think that it is difficult to pass the exam and get the certification.

Adam Ranger" Success In The Amazon Exam Was So Simple Thanks To Photoexperienceacademy!, If you use Photoexperienceacademy braindumps as your AWS-Certified-Cloud-Practitioner Exam prepare material, we guarantee your success in the first attempt.

We are providing you 100% guaranteed success **Latest AWS-Certified-Cloud-Practitioner Dumps Ebook** in the very first attempt, It will be enough for you to pass the exam.

NEW QUESTION: 1You manage a single-domain, on-premises Active Directory forest named contoso.com. The forest functional level is Windows Server 2016. You have several on-premises applications that depend on Active Directory. You plan to migrate the applications to Azure. You need to recommend an identity solution for the applications. The solution must meet the following requirements: Eliminate the need for hybrid network connectivity. Minimize management overhead for Active Directory. What should you recommend?**A.** In Azure, deploy an additional child domain to the contoso.com forest.**B.** In Azure, deploy additional domain controllers for the contoso.com domain.**C.** Implement Azure Active Directory Domain Services (Azure AD DS).**D.** Implement a new Active Directory forest in Azure.**Answer: B****Explanation:** Explanation/Reference: Testlet 1 Case study This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided. To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study. At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section. To start the case study To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business

requirement, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

Contoso, Ltd. is a US-based financial services company that has a main office in New York and a branch office in San Francisco.

Existing Environment

Payment Processing System

Contoso hosts a business-critical payment processing system in its New York data center. The system has three tiers: a front-end web app, a middle-tier web API, and a back-end data store implemented as a Microsoft SQL Server 2014 database. All servers run Windows Server 2012 R2. The front-end and middle-tier components are hosted by using Microsoft Internet Information Services (IIS). The application code is written in C# and ASP.NET. The middle-tier API uses the Entity Framework to communicate to the SQL Server database. Maintenance of the database is performed by using SQL Server Agent jobs. The database is currently 2 TB and is not expected to grow beyond 3 TB. The payment processing system has the following compliance-related requirements:

- Encrypt data in transit and at rest. Only the front-end and middle-tier components must be able to access the encryption keys that protect the data store.
- Keep backups of the data in two separate physical locations that are at least 200 miles apart and can be restored for up to seven years.
- Support blocking inbound and outbound traffic based on the source IP address, the destination IP address, and the port number.
- Collect Windows security logs from all the middle-tier servers and retain the logs for a period of seven years.
- Inspect inbound and outbound traffic from the front-end tier by using highly available network appliances.
- Only allow all access to all the tiers from the internal network of Contoso.
- Tape backups are configured by using an on-premises deployment of Microsoft System Center Data Protection Manager (DPM), and then shipped offsite for long term storage.

Historical Transaction Query System

Contoso recently migrated a business-critical workload to Azure. The workload contains a .NET web service for querying the historical transaction data residing in Azure Table Storage. The .NET web service is accessible from a client app that was developed in-house and runs on the client computers in the New York office. The data in the table storage is 50 GB and is not expected to increase.

Current Issues

The Contoso IT team discovers poor performance of the historical transaction query system, as the queries frequently cause table scans.

Requirements

Planned Changes

Contoso plans to implement the following changes:

- Migrate the payment processing system to Azure.
- Migrate the historical transaction data to Azure Cosmos DB to address the performance issues.

Migration Requirements

Contoso identifies the following general migration requirements:

- Infrastructure services must remain available if a region or a data center fails. Failover must occur without any administrative intervention.
- Whenever possible, Azure managed services must be used to minimize management overhead.
- Whenever possible, costs must be minimized.

Requirements for the payment processing system

Contoso identifies the following requirements for the payment processing system:

- If a data center fails, ensure that the payment processing system remains available without any administrative intervention. The middle-tier and the web front end must continue to operate without any additional configurations.
- Ensure that the number of compute nodes of the front-end and the middle tiers of the payment processing system can increase or decrease automatically based on CPU utilization.
- Ensure that each tier of the payment processing system is subject to a Service Level Agreement (SLA) of 99.99 percent availability.
- Minimize the effort required to modify the middle-tier API and the back-end tier of the payment processing system.
- Generate alerts when unauthorized login attempts occur on the middle-tier virtual machines.
- Ensure that the payment processing system preserves its current compliance status.
- Host the middle tier of the payment processing system on a virtual machine.

Requirements for the historical transaction query system

Contoso identifies the following requirements for the historical transaction query system:

- Minimize the use of on-premises infrastructure services.
- Minimize the effort required to modify the .NET web service querying Azure Cosmos DB.
- Minimize the frequency of table scans.
- If a region fails, ensure that the historical transactions query system remains available without any administrative intervention.

Information Security Requirements

The IT security team wants to ensure that identity management is performed by using Active Directory. Password hashes must be stored on-premises only. Access to all business-critical systems must rely on Active

Directory credentials. Any suspicious authentication attempts must trigger a multi-factor authentication prompt automatically. legitimate users must be able to authenticate successfully by using multi-factor authentication.

NEW QUESTION: 2 A resource of type Application is configured to be monitored by the Intelligent Monitoring Framework. Which resource attribute should be exclusively configured in order to enable the Proactive Prevention of Concurrency feature for the resource of type Application?
A. MonitorProgram **B.** MonitorProcesses **C.** PidFiles **D.** StartProgram
Answer: B

NEW QUESTION: 3 SmartEvent does NOT use which of the following procedures to identify events?
A. Matching a log against local exclusions **B.** Matching a log against each event definition **C.** Create an event candidate **D.** Matching a log against global exclusions
Answer: A
Explanation: Events are detected by the SmartEvent Correlation Unit. The Correlation Unit task is to scan logs for criteria that match an Event Definition. SmartEvent uses these procedures to identify events:
* Matching a Log Against Global Exclusions
* Matching a Log Against Each Event Definition
* Creating an Event Candidate
* When a Candidate Becomes an Event

NEW QUESTION: 4 A. Option D B. Option E C. Option A D. Option C E. Option F F. Option B
Answer: A,B,E,F
