**NEW QUESTION: 1**When a configuration change requires a reboot, which policy specifies how Cisco UCS manager should proceed?**A.** maintenance policy**B.** local disk policy**C.** boot policy**D.** host firmware policy**Answer: A****Explanation:**ExplanationExplanationUse the Maintenance Policy to specify how Cisco UCS Manager should proceed for configuration changes that will have a service impact or require a server reboot. Values for the Maintenance Policy can be "immediate", "user-ack", or "timer automatic". The best practice is to not use the "default" policy, and instead to create and use Maintenance Policies for either "user-ack" or "timer automatic", and to always have these as elements of the Service Profile or Service Profile Template definition.[http://www.cisco.com/c/en/us/products/collateral/servers-unified-computing/ucs-manager/whitepaper\\_c11-697337.html](http://www.cisco.com/c/en/us/products/collateral/servers-unified-computing/ucs-manager/whitepaper_c11-697337.html)

inelastic.**Answer: B**Explanation:Choice "c" is correct. Goods that are important for a comfortable life-style would be relatively priceinsensitive (i.e., inelastic). For example, demand for electricity would only decrease if there were anenormous increase in price (people might then use other forms of energy - such as solar). Only goods thatare absolute necessities (a theoretical example is water) have perfectly inelastic demand curves. That is,no matter what price is charged, people will still buy the product because they need it to stay alive.Choices "a", "b", and "d" are incorrect, per Explanation: for choice "c" above.
