SOAPは組み込み機能としてのセキュリティを提供しないので、セキュリティのために何に依存する必要がありますか？**A. TLSB. トークン化C. SSLD. 暗号化****Answer: D****Explanation:** Simple Object Access Protocol (SOAP) uses Extensible Markup Language (XML) for data passing, and it must rely on the encryption of those data packages for security. TLS and SSL (before it was deprecated) represent two common approaches to using encryption for protection of data transmissions. However, they are only two possible options and do not encapsulate the overall concept the question is looking for. Tokenization, which involves the replacement of sensitive data with opaque values, would not be appropriate for use with SOAP because the actual data is needed by the services.
