Some people say that to pass the Oracle 1z1-106 exam certification is tantamount to success.

NEW QUESTION: 1 Which two protocols does the internet layer in the TCP/IP model encapsulate? (Choose two)**A.** DNS**B.** TCP**C.** Icmp**D.** SMTP**E.** ARP**Answer: C,E**

NEW QUESTION: 2HOTSPOTYou have a server named Server1 that has the Web Server (IIS) server role installed. You obtain a Web Servercertificate.You need to configure a website on Server1 to use Secure Sockets Layer (SSL). To which storeshould you import the certificate?To answer, select the appropriate store in the answer area.**Answer:** Explanation:When organizations deploy their own public key infrastructure (PKI) and install a private trusted root CA, their CAautomatically sends its certificate to all domain member computers in the organization. The domain member clientand server computers store the CA certificate in the Trusted Root Certification Authorities certificate store. After thisoccurs, the domain member computers trust certificates that are issued by the organization trusted root CA.For example, if you install AD CS, the CA sends its certificate to the domain member computers in your organizationand they store the CA certificate in the Trusted Root Certification Authorities certificate store on the local computer. Ifyou also configure and autoenroll a server certificate for your NPS servers and then deploy PEAP-MS-CHAP v2 forwireless connections, all domain member wireless client computers can successfully authenticate your NPS serversusing the NPS server certificate because they trust the CA that issued the NPS server certificate.On computers that are running the Windows operating system, certificates that are installed on the computer arekept in a storage area called the certificate store. The certificate store is accessible using the Certificates MicrosoftManagement Console (MMC) snap-in.This store contains multiple folders, where certificates of different types are stored. For example, the certificate storecontains a Trusted Root Certification Authorities folder where the certificates from all trusted root CAs are kept.When your organization deploys a PKI and installs a private trusted root CA using AD CS, the CA automatically sendsits certificate to all domain member computers in the organization. The domain member client and server computersstore the CA certificate in the Trusted Root Certification Authorities folder in the Current User and the Local Computercertificate stores. After this occurs, the domain member computers trust certificates that are issued by the trustedroot CA.Similarly, when you autoenroll computer certificates to domain member client computers, the certificate is kept in thePersonal certificate store for the Local Computer. When you autoenroll certificates to users, the user certificate is keptin the Personal certificate store for the Current User.http: //technet. microsoft. com/en-us/library/cc730811. aspxhttp: //technet. microsoft. com/en-us/library/cc730811. aspx http: //technet. microsoft. com/en-us/library/cc772401%28v=ws. 10%29. aspxhttp: //technet. microsoft. com/en-us/library/ee407543%28v=ws. 10%29. aspx
