NEW QUESTION: 3 Which of the following is the PRIMARY safeguard for securing software and data within an information processing facility?
A. Logical access controls
B. Security awareness
C. Reading the security policy
D. Security committee
Answer: A
Explanation:
Explanation/Reference:Explanation:To retain a competitive advantage and meet basic business requirements, organizations must ensure that the integrity of the information stored on their computer systems preserve the confidentiality of sensitive data and ensure the continued availability of their information systems. To meet these goals, logical access controls must be in place. Awareness (choice A) itself does not protect against unauthorized access or disclosure of information. Knowledge of an information systems security policy (choice B), which should be known by the organization's employees, would help to protect information, but would not prevent the unauthorized access of information. A security committee (choice C) is key to the protection of information assets, but would address security issues within a broader perspective.

NEW QUESTION: 4 Matt, a security administrator, wants to configure all the switches and routers in the network in order to securely monitor their status. Which of the following protocols would he need to configure on each device?
A. IPSec
B. SNMP
C. SNMPv3
D. SMTP
Answer: C
Explanation:
Explanation: Currently, SNMP is predominantly used for monitoring and performance management. SNMPv3 defines a secure version of SNMP and also facilitates remote configuration of the SNMP entities.
