NEW QUESTION: 1 Which Cisco Unified Contact Center Express data store contains CSQ information?
A. script data store
B. historical data store
C. agent data store
D. repository data store
E. configuration data store
Answer: E
Explanation: Explanation/Reference: The Database component is required for any Unified CCX deployment and manages access to the database. The Unified CCX Database contains four data stores. They are as follows: The configuration data store contains Unified CCX configuration information such as resources (agents), skills, resource groups, teams, and CSQ information. The repository data store contains user prompts, grammars, and documents. The agent data store contains agent logs, statistics, and pointers to the recording files. The historical data store contains Contact Call Detail Records (CCDRs). Reference:

NEW QUESTION: 2 Your network contains an Active Directory domain named contoso.com. The domain contains a main office and a branch office. An Active Directory site exists for each office. The domain contains two servers named Server1 and Server2 that run Windows Server 2012 R2. Both servers have the DHCP Server server role installed. Server1 is located in the main office site. Server2 is located in the branch office site. Server1 provides IPv4 addresses to the client computers in the main office site. Server2 provides IPv4 addresses to the client computers in the branch office site. You need to ensure that if either Server1 or Server2 are offline, the client computers can still obtain IPv4 addresses. The solution must meet the following requirements: - The storage location of the DHCP databases must not be a single point of failure. - Server1 must provide IPv4 addresses to the client computers in the branch office site only if Server2 is offline. - Server2 must provide IPv4 addresses to the client computers in the main office site only if Server1 is offline. Which configuration should you use?
A. load sharing mode failover partners
B. a Network Load Balancing (NLB) cluster
C. hot standby mode failover partners
D. a failover

cluster
Answer: C Explanation: Explanation/Reference: Explanation: Needs to be a DHCP Failover option
Incorrect Answers: A: The load sharing mode of operation is best suited to deployments where both servers in a failover relationship are located at the same physical site. B: Hot standby mode of operation is best suited to deployments where a central office or data center server acts as a standby backup server to a server at a remote site, which is local to the DHCP clients D: Needs to be a DHCP Failover option

NEW QUESTION: 3 **Answer:** Explanation: Explanation
Column 1: Asynchronous-commit
Asynchronous-commit replicas support only the manual failover mode.
Column 2: Synchronous-commit
Synchronous-commit replicas support two settings-automatic or manual. The "automatic" setting supports both automatic failover and manual failover. Three forms of failover exist: automatic failover (without data loss), planned manual failover (without data loss), and forced manual failover (with possible data loss), typically called forced failover.
